Performance: The fund outperformed its benchmark in February as global stocks continued their rally. Bond markets were weaker as investors reset expectations on the rate reduction cycle in the U.S amidst strong economic data.

▲ **Contributors:** Selection and overweight in technology and consumer discretionary. High yield credit exposure.

▼ **Detractors:** Selection in energy and communication services. Exposure to US & European duration and to cash.

Positioning: Overweight equities, with an emphasis on stable growth, balanced with quality cyclicals. Modest duration underweight, overweight credit and securitized. Cash, derivatives, and currency exposure as risk mitigants.

▲ **Increased:** Within equities, information technology and consumer discretionary. Corporate credit. U.S. Dollar.

▼ **Decreased:** Within equities, consumer staples and material exposure. Developed sovereign rates. Swiss franc.

A history of competitive performance and limited downside

By maintaining a long-term objective of capital appreciation, with a mindful eye on downside volatility, the Fund has aimed to provide a smoother investment experience by generating competitive returns with fewer and shallower drawdowns compared to equities. **A risk aware mandate can make a big difference to the overall client experience.**

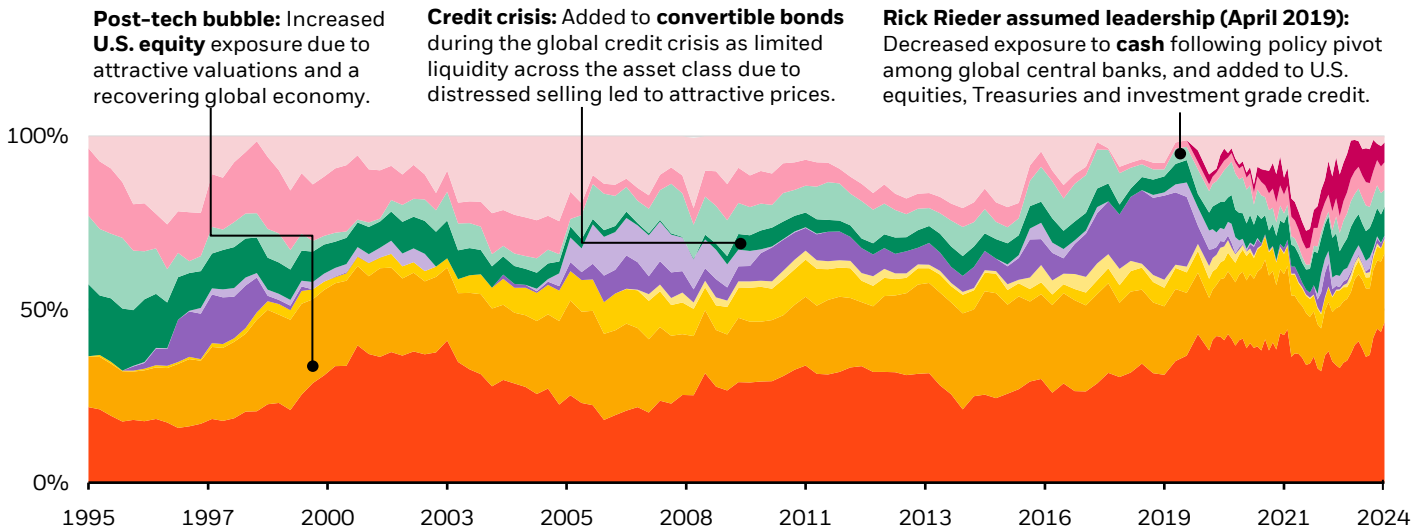

Source: Bloomberg, Morningstar. Data reflects a time series of rolling 3-year cumulative returns based on calendar month-ends. Date range represents the life of the fund (Institutional share class inception (2/28/89) through the recent quarter-end) and is applied across all categories. The best 3-year return represents the highest 3-year return within the time series for each category. The average 3-year return represents the average 3-year return over the time series for each category. The worst 3-year return represents the lowest 3-year return with the time series for each category. The number of negative of periods represents the total number of periods where the 3-year return was <0.00% for each category. Asset classes represented by FTSE World Gov't Bond Index, S&P 500 Index, FTSE World Index. Morningstar category by the Global Allocation Funds average. All data as of 02/29/24. **Fund data based on Institutional shares, which may not be available to all investors; other share classes will vary.** Index performance is shown for illustrative purposes only. It is not possible to invest directly in an unmanaged index.

Performance data quoted represents past performance and is no guarantee of future results. Investment returns and principal values may fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. All returns assume reinvestment of dividends and capital gains. Current performance may be lower or higher than that shown. For current month-end returns visit www.blackrock.com.

Morningstar has awarded the fund's Institutional share class a Gold medal. (Last rating 05/01/23.)¹

The overall Morningstar rating of 4 stars pertains to the fund's Institutional shares, rated against 360 funds in the Global Allocation category as of 02/29/24. Ratings are based on a risk-adjusted total return and a weighted average of performance figures associated with 3-, 5- and 10-year Morningstar rating metrics. Ratings are determined monthly and subject to change.² **BlackRock provides compensation in connection with obtaining or using third-party ratings and rankings.**

Designed to seek a better outcome

The Fund's mission is to provide a core holding, suitable for a broad range of clients and deliver a competitive rate of return with less volatility than a global stock portfolio over a full market cycle. Since its inception in 1989, **the fund has outperformed global stocks with one-third less volatility.***

Source: BlackRock, Bloomberg. Based on a hypothetical investment of \$10,000 in the fund and FTSE World Index made first month post inception (2/3/89). * Volatility is represented by annualized standard deviation. Standard deviation for the fund: 10.00% and global stocks: 15.42%.

Our view on the market and portfolio positioning

Stocks are rallying, bonds are (mostly) stable and fears of a recession are rapidly receding. In most respects we're a long way from the dark days of 2022. That said, one thing has not changed: bonds are still a less reliable hedge than in years past. After surging in January and mid-February, long-term yields have slipped in recent weeks. However, while the bond market has been calmer, there are still lingering questions regarding inflation, more specifically how quickly it will revert to the Federal Reserve's (Fed) long-term target of 2%. Both the level and volatility of inflation are important for how stocks and bonds co-move. Until inflation is both lower and more stable, we may remain in an environment in which bonds are a less consistent hedge of equity risk.

Less macro stability has led to a different stock/bond dynamic. Prior to 2021, stock bond correlations (i.e., extent to which prices change together) were stable and negative for nearly 20 years. That began to change in 2021 and we have still not gone back to the norms of previous decades. Correlations across most time frames remain positive and significantly higher than they were pre-pandemic. While numerous factors influence asset correlations, for stocks and bonds, an important metric to watch is the volatility of inflation. Stock/bond correlations tend to be negative when the volatility, i.e., standard deviation of inflation is low and stable. And while inflation volatility, along with headline inflation, is slowly falling, it remains elevated compared to the pre-pandemic average.

Until we see a further stabilization in inflation, where to look for equity hedges? As has been the case in 2022, the dollar still appears the best bet. Dollar/stock correlations remain significantly negative, suggesting a large dollar position may provide a decent hedge when equities are falling. With the economy improving and recession fears all but gone, investors are more concerned about 'sticky' inflation and the Fed. In this environment, the U.S. dollar is likely to respond positively if fewer rate cuts translate into a stock market correction. For this reason, at least until the inflation risk completely fades, staying overweight the dollar may be the better hedge.

Within the Fund, we are overweight stocks, largely driven by US exposure. Positioning is concentrated in stable growth companies that can generate earnings consistency and are aligned with long-term structural trends, as well as quality cyclical companies that we believe can withstand a cooling economy. Within fixed income, we remain underweight duration and tactical in yield curve positioning. The bulk of our duration exposure is in U.S. rates, with an emphasis to the belly of the curve (3–5-year) on the view that this part would benefit as the curve steepens once Fed policy transitions. We remain cautious on the long end of the curve due to short-term supply concerns that could push rates higher. The bulk of our exposure is in a diversified basket of corporate credit, securitized assets, and emerging market sovereigns, most of which is out of benchmark exposure. In-line with the fund's risk aware mandate, we maintain exposure to derivatives, commodity-related, cash and FX positioning to help provide diversification.

Annualized total returns as of 12/31/23 for Institutional shares: 1 Yr, 12.63%; 5 Yr, 7.57%; 10 Yr, 4.80%; Since Inception, 9.08%; for Investor A shares without/with maximum sales charge: 1 Yr, 12.35%/6.45%; 5 Yr, 7.28%/6.14%; 10 Yr, 4.52%/3.96%, Since Inception 8.80%/8.63%.

Data represents past performance and is no guarantee of future results. Investment returns and principal values may fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. All returns assume reinvestment of dividends and capital gains. Current performance may be lower or higher than that shown. Share classes have different sales charges, fees and other features. Returns with sales charge reflect the deduction of current maximum initial sales charge of 5.25% for Investor A shares. Institutional shares have no front- or back-end load, limited availability and may be purchased at various minimums. See prospectus for details.

Investment returns reflect total fund operating expenses, net of all fees, waivers and/or expense reimbursements. Expenses, as stated in the fund's most recent prospectus, for Institutional/Investor A shares: Total, **0.88%/1.13%**; Net, Including Investment-Related Expenses (dividend expense, interest expense, acquired fund fees and expenses and certain other fund expenses): **0.84%/1.09%**. Institutional and Investor A have contractual waivers with an end date of 6/30/25, terminable upon 90 days' notice. Index performance is shown for illustrative purposes only. It is not possible to invest directly in an unmanaged index. Net Expenses, Excluding Investment Related Expenses for Institutional/Investor A shares: 0.83%/1.08%.

Important risks: The fund is actively managed and its characteristics will vary. Stock and bond values fluctuate in price so the value of your investment can go down depending on market conditions. International investing involves special risks including, but not limited to currency fluctuations, illiquidity and volatility. These risks may be heightened for investments in emerging markets. Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments. Non-investment-grade debt securities (high-yield/junk bonds) may be subject to greater market fluctuations, risk of default or loss of income and principal than higher-rated securities. Asset allocation strategies do not assure profit and do not protect against loss. Short selling entails special risks. If the fund makes short sales in securities that increase in value, the fund will lose value. Any loss on short positions may or may not be offset by investing short-sale proceeds in other investments. The fund may use derivatives to hedge its investments or to seek to enhance returns. Derivatives entail risks relating to liquidity, leverage and credit that may reduce returns and increase volatility.

The opinions expressed are those of the fund's portfolio management team as of February 29, 2024, and may change as subsequent conditions vary. Information and opinions are derived from proprietary and nonproprietary sources deemed by BlackRock to be reliable, are not necessarily all-inclusive and are not guaranteed as to accuracy.

1 Morningstar Medalist Rating™ is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about these ratings, including their methodology, please go to global.morningstar.com/managerdisclosures/. The Morningstar Medalist Ratings are not statements of fact, nor are they credit or risk ratings. The Morningstar Medalist Rating (i) should not be used as the sole basis in evaluating an investment product, (ii) involves unknown risks and uncertainties which may cause expectations not to occur or to differ significantly from what was expected, (iii) are not guaranteed to be based on complete or accurate assumptions or models when determined algorithmically, (iv) involve the risk that the return target will not be met due to such things as unforeseen changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, tax rates, exchange rate changes, and/or changes in political and social conditions, and (v) should not be considered an offer or solicitation to buy or sell the investment product. A change in the fundamental factors underlying the Morningstar Medalist Rating can mean that the rating is subsequently no longer accurate. **2 The Morningstar Rating™** for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. With respect to U.S.-domiciled funds in the Global Allocation category, the fund received a Morningstar Rating of 2 stars for the 3-year period, rated against 360 funds; 4 stars for the 5-year period, rated against 340 funds; and 4 stars for the 10-year period, rated against 245 funds. Ratings are for Institutional share class. Other classes may have different performance characteristics. **3 Fund Inception:** 2/3/89. **4 The performance information** for periods prior to the inception date of the Investor A share class (10/21/94) is based on the fund's Institutional shares, adjusted to reflect the fees and expenses applicable to the Investor A share class. See the fund's prospectus for more details. **5 The FTSE World Index** is comprised of world equities, including the U.S. **6 The Reference Benchmark** is 36% S&P 500 Index, 24% FTSE World (ex-U.S.) Index, 24% ICE BofAML Current 5-Year U.S. Treasury Index and 16% FTSE Non-U.S. Dollar World Government Bond Index. S&P 500 Index comprises large-capitalization U.S. equities. FTSE World (ex-U.S.) Index comprises world equities, ex-U.S. ICE BofAML 5-year U.S. Treasury Bond Index tracks the 5-year U.S. Treasury bond. FTSE Non-U.S. Dollar World Government Bond Index tracks government bond indices, ex-U.S. **7 Analyst Driven %** is the analyst input into the overall rating assignment, including direct analyst coverage and inheritance of an analyst-rated pillar. Data Coverage % is available input data for rating calculation at the Pillar level.

You should consider the investment objectives, risks, charges and expenses of the fund carefully before investing.
