FUND OVERVIEW

- The Fund aims to maximise the return on your investment through a combination of capital growth and income on the Fund's assets.
- The Fund invests globally at least 70% of its total assets in fixed income securities. These include bonds and money market instruments (i.e. debt securities with short term maturities).
- The fixed income securities are denominated in various currencies and may be issued by governments, government agencies, companies and supranationals (e.g. the International Bank for Reconstruction and Development).

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Non-investment grade fixed income securities are more sensitive to changes in interest rates and present greater 'Credit Risk' than higher rated fixed income securities.
- Asset backed securities and mortgage backed securities are subject to the same risks described for fixed income securities. These instruments may be subject to 'Liquidity Risk', have high levels of borrowing and may not fully reflect the value of underlying assets.
- Currency Risk: The Fund invests in other currencies. Changes in exchange rates will therefore affect the value of the investment.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.
- Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

GLOSSARY

SFDR Classification: Article 8: Products that promote environmental or social characteristics and promote good governance practices.

Article 9: Products that have sustainable investments as an objective and follow good governance practices. **Other:** Products that do not meet the criteria to be classified as Article 8 or 9.

Yield to Maturity: Yield to Maturity (YTM) is the discount rate that equates the present value of bond's cash flows with its market price (including accrued interest). The fund YTM is the weighted average of fund's individual bond holding YTM's based upon Net Asset Value ('NAV'). The measure does not include fees and expenses. For callable bonds, YTM is the Yield-to-Worst.

Effective Duration: Effective duration is a measure of a fund's interest-rate sensitivity. Put simply, the longer a fund's duration, the more sensitive the fund is to shifts in interest rates. So a fund with a duration of 10 years is twice as volatile as a fund with a five-year duration.

IMPORTANT INFORMATION:

¹Negative weightings may result from specific circumstances (including timing differences between trade and settlement dates of securities purchased by the funds) and/or the use of certain financial instruments, including derivatives, which may be used to gain or reduce market exposure and/or risk management. Allocations are subject to change
