Simple, ready-made investing.

The MyMap range: Making investing in the UK easier and more affordable

Everyone has a My.

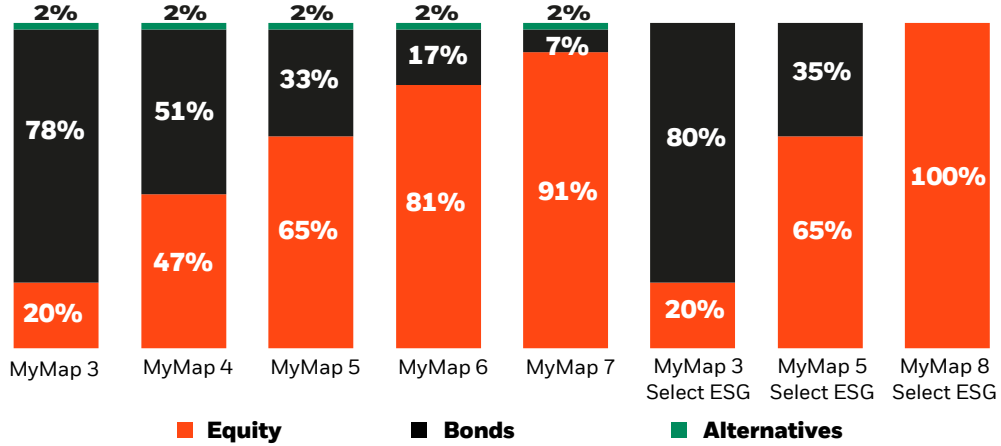

MyHome. MyFamily. MyBusiness. MyRetirement. Whatever your My is, the MyMap ready-made, multi-asset fund range has done the hard work for you.

The MyMap range is designed to make investing easier and simpler. With high inflation and volatile financial markets, it can be challenging to build resilient portfolios.

The MyMap range seeks to take the hard work out of investing, providing ready-made diversified portfolios designed to be simple, cost-effective,and risk-managed.

Risk: Diversification and asset allocation may not fully protect you from market risk.

The power of investing

Investing has the potential to generate returns that may beat inflation. This would protect your wealth from erosion, while also helping it grow over time.

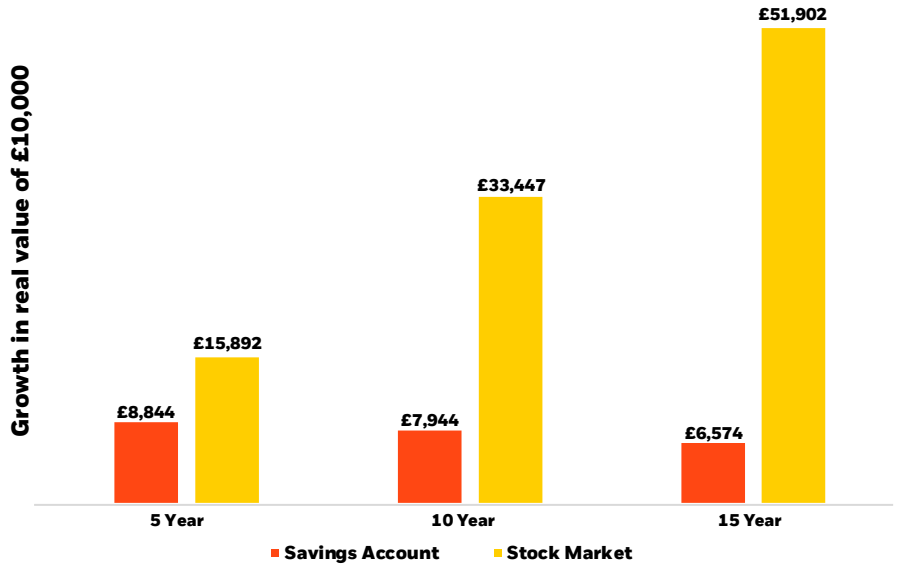

This chart compares the growth in the purchasing power of £10,000 invested in the stock market and held in a savings account. Both results are based on real historical returns.

Over a five year period an investment in the stock market would resulted in an almost doubling of purchasing power – from £10,000 to more than £15,000. By contrast, the returns on a savings account have not been high enough to overpower the impact of inflation. This means that purchasing power would have actually reduced.

Over longer time periods this effect becomes even more pronounced. A 15 year period of holding savings in cash would have resulted in the purchasing power almost halving. While an investor in the stock market would have increased their purchasing power to more than £51,000 pounds.

Risk: The value of an investment can fall as well as rise and investors may not get back the original amount invested. There is a risk that the entire amount invested may be lost. Past performance is not a reliable indicator of current or future results. BlackRock makes no representations or warranties as to the accuracy or completeness of any past, estimated or simulated performance results contained herein, and further nothing contained herein shall be relied upon as a promise by, or representation by BlackRock whether as to past or future performance results.

Investing outperforms savings over the long term

For illustrative purpose only. Index performance returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index.

02

Key benefits of MyMap

Simple

BlackRock's MyMap funds are ready-made and have been built with risk levels in mind, so the only thing you need to do is choose one that fits your risk profile.

Diversified

The range of underlying investments is broad, so all your eggs aren't in one basket.

Risk: Diversification and asset allocation may not fully protect you from market risk.

Cost-effective

Each MyMap fund is a collection of cost-effective exchange-traded funds (ETFs) and index funds, meaning we can keep fees low and you can keep more of the returns. All MyMap funds charge a low-cost 0.17% fee *.

*D-share class only.

Actively managed

Risk is regularly assessed by our expert team to aim it stays within predefined limits, but whilst also seeking the best possible returns.

Risk: Risk management cannot fully eliminate the risk of investment loss.

MKTG0326-5304053-EXP0327-5/13

03

How does MyMap work?

MyMap is a range of actively managed multi-asset funds that invest in different types of investments including stocks, bonds, and alternatives, providing more diversification than investing in a single investment type.

Under the bonnet of each MyMap fund is a collection of exchange-traded funds (ETFs) and index funds. These are investments that aim to track the performance of a specific index. An index represents the total return of a particular group of securities – often stocks or bonds.

Each actively managed MyMap fund offers a different level of risk and potential return to match your long-term goals and financial situation.

All you have to do is select the MyMap fund that best matches the risk level you're comfortable with, and we do all of the work managing the fund for you.

Opening doors globally

MyMap leverages BlackRock's local team, global insights, expertise, and risk management and portfolio analytics. Making investing in the UK easier and more affordable.

You've heard the saying, don't put all your eggs in one basket. Because MyMap funds invest in a variety of assets, they provide more diversification than investing in a single asset class. And you don't even have to pick what goes in the basket – we've done that for you.

Global opportunities

The MyMap range has access to over 1,000* BlackRock managed funds, giving you access to a world of opportunities. *As of 31 January 2026.

Risk: Diversification and asset allocation may not fully protect you from market risk.

BlackRock for more than 30 years

Helping more and more people experience financial wellbeing for over 30 years.

MKTG0326-5304053-EXP0327-6/13

The MyMap fund range is cost-effective

Under the hood of each MyMap fund is a collection of exchange-traded funds (ETFs) and index funds. These are investments that aim to track the performance of a specific index. An index represents the total return of a particular group of securities – often stocks or bonds. All MyMap funds charge a low-cost 0.17% fee.

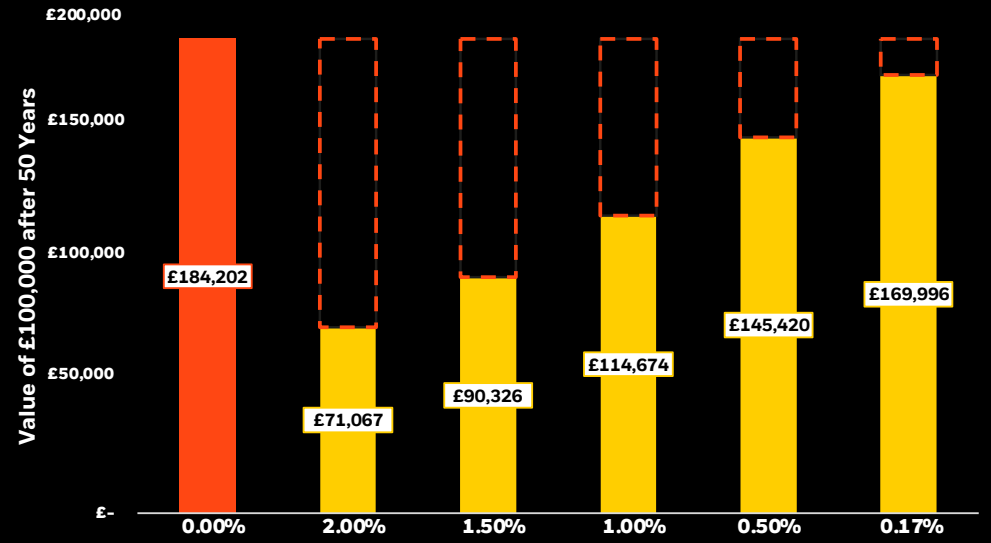

The amount that a fund costs can have a very meaningful impact on the return that it generates. On the right-hand side we have illustrated a hypothetical £100,000 investment portfolio that grows over 50 years at an average annual rate of 6%*. The red bar represents the total return of this portfolio assuming it is not subject to any fees. The yellow bars demonstrate the return that an investor would receive with different annual fee levels applied to the fund.

The corrosive power of fees is very clear. This is why we focus on cost efficiency when building the MyMap funds – to ensure that you get to keep as much of the funds return as possible.

Risk: Diversification and asset allocation may not fully protect you from market.

*Source: BlackRock Investment Institute Capital Market Assumptions, as of 24 March 2026. Expected return of a 60/40 global equity/bond portfolio: ~6% p.a. For illustration only. Not a forecast.

The impact of fees

04

Compare the MyMap range

We aim to capture investment potential, whilst managing the costs and risks associated with investing.

Each MyMap fund has a predefined risk profile, which is vital to achieving the right balance of risk and return potential – one that reflects your financial position and investment goals. You therefore need only select the fund with the profile that best matches these.

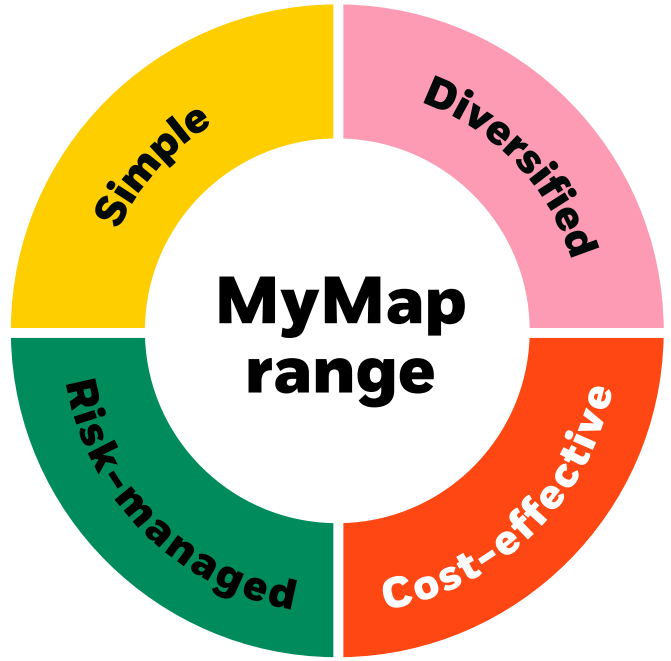

Each MyMap fund is designed to target different levels of market volatility, with the target volatility increasing from MyMap 3 to MyMap 8 Select ESG. Higher target volatility represents a higher risk which potentially means a larger exposure to equity holdings and a lower exposure to bonds.

Our range is also mapped to risk rating agencies, helping you compare each fund's risk against your expectations.

MyMap funds 3, 4, 5 , 6 and 7 have been given a gold rating by Morningstar. The Gold rating is reserved for Morningstar's highest conviction funds, and represents an expectation that it will outperform peers.

Source: Morningstar, 31 January 2026.

Risk: Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

For illustrative purposes only.

Morningstar gold rated

The core MyMap fund range has achieved a Morningstar Gold status, awarded to funds that stand out for strong management, disciplined process, and their long term potential.

Description of Fund Risks

Counterparty Risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Credit Risk

The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

Credit Risk (Fixed Income)

Changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential oractual credit rating downgrades may increase the level of risk.

Currency Risk

The Fund invests in other currencies. Changes in exchange rates will therefore affect the value of the investment.

Equity securities

The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.

Liquidity Risk

The Fund’s investments may have low liquidity which often causes the value of these investments to be less predictable. In extreme cases, the Fund may not be able to realise the investment at the latest market price or at a price considered fair.

ESG Screening Risk

The Fund seeks to exclude companies engaging in certain activities inconsistent with ESG criteria. Such ESG screening may reduce the potential investment universe and this may adversely affect the value of the Fund's investments compared to a fund without such screening.
