FUND OVERVIEW

- The Fund aims to offer returns in line with money market rates consistent with preservation of capital and liquidity. Money invested in the Fund is not protected or guaranteed. The Fund does not rely on external support for guaranteeing the liquidity of the Fund or stabilising the net asset value (NAV) per share. The Fund is a shortterm money market fund.
- The Fund invests at least 90% of its total assets in fixed income (FI) securities denominated in US dollars. These include bonds and money market instruments (i.e. debt securities with short term maturities).
- The FI securities may be issued by the United States (US) government and its agencies, non-US governments and government agencies, and companies and supranationals (e.g. the International Bank for Reconstruction and Development).

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Short Term Money Market Funds do not generally experience extreme price variations. Changes in interest rates will impact the Fund.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

GLOSSARY

SFDR Classification: Article 8: Products that promote environmental or social characteristics and promote good governance practices.

Article 9: Products that have sustainable investments as an objective and follow good governance practices. **Other:** Products that do not meet the criteria to be classified as Article 8 or 9.

Nominal Weighted Average Life (WAL): A bond's maturity is the length of time until the principal amount of the bond is to be repaid. WAL of the fund is calculated as the average of the underlying bonds' maturities, adjusted to take account of their relative weight (size) within the fund.

Effective Duration: Effective duration is a measure of a fund's interest-rate sensitivity. Put simply, the longer a fund's duration, the more sensitive the fund is to shifts in interest rates. So a fund with a duration of 10 years is twice as volatile as a fund with a five-year duration.

Yield to Maturity: Yield to Maturity (YTM) is the discount rate that equates the present value of bond's cash flows with its market price (including accrued interest). The fund YTM is the weighted average of fund's individual bond holding YTM's based upon Net Asset Value ('NAV'). The measure does not include fees and expenses. For callable bonds, YTM is the Yield-to-Worst.
