## Class X Euro

### BlackRock Institutional Pooled Funds

Performance, Portfolio Breakdowns and Net Asset information as at: 30-Apr-2026. All other data as at 18-May-2026.

This document is marketing material. For Investors in the Denmark. Investors should read the KIID/PRIIPs document and prospectus prior to investing, and should refer to the prospectus for the funds full list of risks.

#### FUND OVERVIEW

- The Fund aims to outperform the Bloomberg Euro Aggregate Treasury Index ("Index").
- The Fund invests at least 90% of its total assets in Euro denominated fixed income ("FI") securities (such as bonds) issued by, or giving exposure to, governments, government agencies of, and supranationals (e.g. the International Bank for Reconstruction and Development) domiciled in, or exercising the predominant part of their activity in, Europe and, when determined appropriate, money market instruments (i.e. debt securities with short-term maturities), deposits and cash. These FI securities and money market instruments will be investment grade (i.e. meet a specified level of credit worthiness) at the time of purchase.
- The Fund is actively managed and the investment manager ("IM") has discretion to select the Fund's investments. In doing so, the IM will refer to the Index when constructing the Fund's portfolio, and also for performance comparison and risk management purposes, as further described in the prospectus. The Fund is designed to provide investors with achievement of the investment objective by typically taking a low to conservative level of active risk relative to the Index, in order to seek a commensurate active return in excess of applicable management fees over the short term (i.e. up to 3 years). The IM is not bound by the components or weighting of the Index and may also use its discretion to invest in securities not included in the Index. However, the level of active risk taken by the Fund may limit the extent to which the portfolio holdings will deviate from the Index.

#### RISK INDICATOR

##### Lower Risk

Potentially Lower Rewards

##### Higher Risk

Potentially Higher Rewards

**CAPITAL AT RISK:** The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

#### KEY RISKS:

- Credit risk, changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential or actual credit rating downgrades may increase the level of risk.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.
- Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

#### RATINGS\*\*

#### KEY FACTS

**Constraint<sup>††</sup>:** Bloomberg Euro Treasury Bond Index

**Asset Class:** Fixed Income

### BlackRock Institutional Pooled Funds

#### GLOSSARY

**SFDR Classification: Article 8:** Products that promote environmental or social characteristics and promote good governance practices.

**Article 9:** Products that have sustainable investments as an objective and follow good governance practices. **Other:** Products that do not meet the criteria to be classified as Article 8 or 9.

**Yield to Maturity:** Yield to Maturity (YTM) is the discount rate that equates the present value of bond's cash flows with its market price (including accrued interest). The fund YTM is the weighted average of fund's individual bond holding YTM's based upon Net Asset Value ("NAV"). The measure does not include fees and expenses. For callable bonds, YTM is the Yield-to-Worst.

**Effective Duration:** Effective duration is a measure of a fund's interest-rate sensitivity. Put simply, the longer a fund's duration, the more sensitive the fund is to shifts in interest rates. So a fund with a duration of 10 years is twice as volatile as a fund with a five-year duration.

#### IMPORTANT INFORMATION:

\*\* The Morningstar Medalist Rating™ is the summary expression of Morningstar's forward-looking analysis of investment strategies using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Analysts assign three pillar ratings (People, Parent and Process) based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. For more detailed information about these ratings and methodology, please go to [global.morningstar.com/managerdisclosures](http://global.morningstar.com/managerdisclosures). The ratings are not statements of fact, nor credit or risk ratings. The rating (i) should not be used as the sole basis in evaluating an investment product, (ii) involves unknown risks which may cause expectations not to occur or to differ from what was expected, (iii) are not guaranteed to be based on complete or accurate assumptions, (iv) involve the risk that the return target will not be met due to unforeseen changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange and tax rates, and/or changes in political and social conditions, and (v) should not be considered an offer or solicitation to buy or sell the investment product.
