This document is marketing material. For Investors in the Norway. Investors should read the KIID/PRIPs document and prospectus prior to investing, and should refer to the prospectus for the funds full list of risks.

FUND OVERVIEW

- The Fund seeks to maximize the return on your investment through a combination of capital growth and income on the Fund's assets over the long term commensurate with a conservative level of risk.
- The Fund has a flexible approach to asset allocation and will seek to diversify its exposure across a variety of asset classes globally. The Fund will seek to achieve its investment objective by investing between 40% and 90% of its assets in other funds including exchange traded funds (ETFs), to gain exposure to fixed income (FI) securities (e.g. bonds), between 10% and 50% of its assets in other funds, including ETFs, to gain exposure to equity securities (e.g. shares), and up to 30% in other funds, including ETFs, which seek to diversify their exposure across a variety of asset classes, including equity, FI, money market instruments (MMIs) (e.g. debt instruments with short-term maturities), deposits, cash and financial derivative instruments (FDIs) (i.e. investments the prices of which are based on one or more underlying assets).
- Generally, the Fund will seek to be positioned such that the Fund's risk as measured by annualised volatility over a rolling 5 year period falls within the range of 4%-8%, however, the Fund's risk profile may fall outside the stated range from time to time. Volatility is the measure of fluctuations of the returns of a given investment. Generally, the higher the volatility, the riskier the investment.

RISK INDICATOR

Lower Risk

Potentially Lower Rewards

Higher Risk

Potentially Higher Rewards

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Credit risk, changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential or actual credit rating downgrades may increase the level of risk.
- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.
- Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

KEY FACTS

Asset Class : Multi Asset
Fund Launch Date : 18-Jul-2016
Share Class Launch Date : 05-Apr-2018
Share Class Currency : EUR
Net Assets of Fund (M) : 33.24 EUR

GLOSSARY

SFDR Classification: Article 8: Products that promote environmental or social characteristics and promote good governance practices.

Article 9: Products that have sustainable investments as an objective and follow good governance practices. **Other:** Products that do not meet the criteria to be classified as Article 8 or 9.

Modified Duration: A measure of price sensitivity of a bond to changes in interest rates. The Modified Duration of the fund is calculated as the average of the underlying bonds' modified duration values, adjusted to take account of their relative weight (size) within the fund.

Price to Earnings: A valuation ratio of a company's current share price compared to its per-share earnings in the current forecast year, calculated as current share price divided by current earnings per share.

Average Market Cap: The average market capitalization of a fund's equity portfolio gives you a measure of the size of the companies in which the fund invests. Market capitalization is calculated by multiplying the number of a company's shares outstanding by its price per share.

Price to Book Ratio: represents the ratio of the current closing price of the share to the latest quarter's book value per share.
