FUND OVERVIEW

The iShares Edge MSCI EM Value Factor UCITS ETF aims to track the performance of an index composed of large- and mid-capitalization stocks from emerging markets, which demonstrate high value characteristics: comparing the price of equity to estimated future earnings; the price of equity relative to book value; and enterprise value of a company relative to its operating cash flow.

KEY BENEFITS

1. Exposure to large- and mid-cap stocks from emerging markets that demonstrate high value characteristics (comparing the price of equity to estimated future earnings; the price of equity relative to book value; and enterprise value of a company relative to its operating cash flow).
2. Access to a specific factor (value), determined by the index provider.
3. May be used to help manage potential exposure and risk within a stock allocation.

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets, failed/delayed delivery of securities or payments to the Fund and sustainability-related risks.
- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
- Although the benchmark index aims to seek exposure to good value securities from within the Parent Index, there is no guarantee that this objective will be achieved.
- Factor Focus Risk: Indices with a factor focus are less diversified than their parent index because they have predominant exposure to a single factor rather than the multiple factor exposure of most indices. Therefore they will be more exposed to factor related market movements. Investors should consider this Fund as part of a broader investment strategy.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Share Class to financial loss.
- Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

The figures shown relate to past performance. **Past performance is not a reliable indicator of future performance. Markets could develop very differently in the future. It can help you to assess how the fund has been managed in the past** Performance is shown on a Net Asset Value (NAV) basis, with gross income reinvested where applicable. Performance data is based on the net asset value (NAV) of the ETF which may not be the same as the market price of the ETF. Individual shareholders may realize returns that are different to the NAV performance. The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.
