Coutts Actively Managed US Equity Fund

A sub-fund of BlackRock Solutions Funds ICAV

Class C Distributing EUR

ISIN: IE000H485EF6

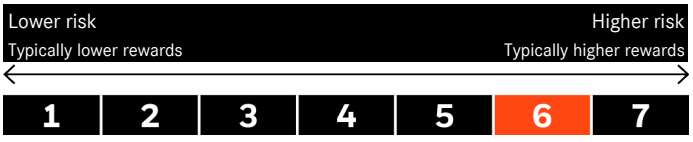

Manager: BlackRock Asset Management Ireland Limited

Objectives and Investment Policy

- The Fund aims to achieve a total return on your investment through a combination of capital growth and income on the Fund's assets.
- The Fund invests at least 80% of its total assets in the equity securities (e.g. shares) of companies incorporated in, listed in, or the main business of which is in, the US and instruments related to such equity securities, including financial derivative instruments (FDIs) (i.e. investments the prices of which are based on one or more underlying assets). The Fund may also invest in other equities and equity-related securities, deposits and cash. Notwithstanding the foregoing, the Fund may hold a significant proportion of its assets in money market funds, money market instruments (i.e. debt securities with short term maturities), deposits and cash for an initial period of at most one month from the date of launch of the Fund.
- The Fund is actively managed. The investment manager (IM) has discretion to select the Fund's investments. In doing so, the IM will refer to the MSCI USA Index (the Index) when constructing the Fund's portfolio, and also for risk management purposes to ensure that the active risk (i.e. degree of deviation from the Index) taken by the Fund remains appropriate given the Fund's investment objective and policy. The Index measures the performance of large and mid capitalization stocks of the US equity market.
- The IM is not bound to the components or weighting of the Index when selecting investments. The IM may also use its discretion to invest in securities not included in the Index in order to take advantage of specific investment opportunities. However, the geographical scope of the investment objective and policy may have the effect of limiting the extent to which the portfolio holdings will deviate from the Index. The Fund is designed to provide investors with a relative gross return in excess of the Index by typically taking a moderate level of active risk in order to seek a commensurate return with respect to management fees over the medium term (i.e. 3 years or more). The Index should be used by investors to compare the performance of the Fund.
- The IM may use FDIs to reduce risk within the Fund's portfolio, reduce investment costs and generate additional income. The Fund may, via FDIs, generate varying amounts of market leverage (i.e. where the Fund gains market exposure in excess of the value of its assets).
- Recommendation: This Fund may not be appropriate for short-term investment.
- Your shares will be distributing shares (i.e. dividend income will be paid on the shares quarterly based on the income received on the Fund's assets).
- The Fund's base currency is US Dollar. Shares for this class are bought and sold in Euro. The performance of your shares may be affected by this currency difference.
- You can buy and sell your shares daily. The minimum initial investment for this share class is €200,000,000.
