

**BlackRock**

# Sustainability-related Website Disclosure

iShares \$ Development Bank Bonds UCITS ETF

Effective Date: 27 March 2024

**This website disclosure provides sustainability-related information about the Fund pursuant to Article 10. of the EU Sustainable Finance Disclosure Regulation (EU) 2019/2088 (“SFDR”).**

**A. Summary**

The Fund invests in Sustainable Investments. BlackRock defines Sustainable Investments as investments in issuers or securities that contribute to an environmental or social objective, do not significantly harm any of those objectives and where investee companies follow good governance practices. BlackRock refers to relevant sustainability frameworks to identify the alignment of the investment to environmental or social objectives. Sustainable Investments should also meet the do no significant harm (DNSH) requirements, as defined by applicable law and regulation. BlackRock has developed a set of criteria to assess whether an issuer or investment does significant harm.

The sustainable investment objective of this Fund is to invest in a portfolio of fixed income securities that, as far as possible and practicable, consists of the component securities of the FTSE World Broad Investment-Grade USD Multilateral Development Bank Bond Capped Index, this Fund’s Benchmark Index. The Fund seeks to achieve its sustainable investment objective by tracking the Benchmark Index which comprises multilateral development bank bonds which must be issued by a multilateral development bank with a mission statement that states the intent to promote sustainable economic development in developing countries by financially supporting their sustainable development goals or by providing non-financial support for infrastructure development such as policy advice or technical assistance.

The Fund seeks to invest in a portfolio of securities that as far as possible and practicable consists of the component securities of the Benchmark Index. It is expected that at least 90% of the Fund's assets will be invested in either securities within the Benchmark Index or in securities that meet the ESG selection criteria of the Benchmark Index. The Fund does not currently commit to invest more than 0% of its assets in Sustainable Investments with an environmental objective aligned with the EU Taxonomy, however, these investments may form part of the portfolio.

BlackRock has developed a highly automated compliance process to help ensure that the Fund is managed in accordance with its stated investment guidelines and applicable regulatory requirements. This includes monitoring of the environmental or social characteristics of the Fund in accordance with the relevant methodology. BlackRock has developed a proprietary methodology for determining Sustainable Investments and the Fund uses a number of other methodologies to measure the attainment of the sustainable investment objective.

BlackRock Portfolio Managers have access to research, data, tools, and analytics to integrate ESG insights into their investment process. ESG datasets are sourced from external third-party data providers, including but not limited to MSCI, Sustainalytics, Refinitiv, S&P and Clarity AI. BlackRock applies a comprehensive due diligence process to evaluate provider offerings with highly targeted methodology reviews and coverage assessments based on the sustainable investment strategy of the product. Data, including ESG data, received through our existing interfaces, and then processed through a series of quality control and completeness checks which seeks to ensure that data is high-quality data before being made available for use downstream within BlackRock systems and applications, such as Aladdin. BlackRock strives to capture as much reported data from companies via 3rd party data providers as practicable, however, industry standards around disclosure frameworks are still evolving, particularly with respect to forward looking

indicators. As a result, in certain cases we rely on estimated or proxy measures from data providers to cover our broad investible universe of issuers.

BlackRock continues to monitor developments in the EU's ongoing implementation of its framework for sustainable investing and its investment methodologies seeking to ensure alignment as the regulatory environment changes. ESG data sets are constantly changing and improving as disclosure standards, regulatory frameworks and industry practice evolve. BlackRock continues to work with a broad range of market participants to improve data quality. Sustainable investing and understanding of sustainability is evolving along with the data environment. Industry participants face challenges in identifying a single metric or set of standardized metrics to provide a complete view on a company or an investment. BlackRock has therefore established a framework to identify sustainable investments taking into account the regulatory requirements.

BlackRock applies a high standard of due diligence in the selection and ongoing monitoring of investments made by the Fund for the purpose of compliance with the investment, liquidity and risk guidelines of the Fund, as well as the sustainability risk and ESG criteria and general performance.

Engagement with companies in which we invest our clients' assets occurs at multiple levels within BlackRock. Where investment teams choose to leverage engagement, this can take a variety of forms but, in essence, the portfolio management team would seek to have regular and continuing dialogue with executives or board directors of engaged investee companies to advance sound governance and sustainable business practices targeted at the identified ESG characteristics and principal adverse indicators, as well as to understand the effectiveness of the company's management and oversight of activities designed to address the identified ESG issues. Engagement also allows the portfolio management team to provide feedback on company practices and disclosures.

The Investment Manager does not perform direct engagement with the companies / issuers within the Benchmark Index as part of the investment strategy of the Fund. The Investment Manager will engage directly with the index and data providers to ensure better analytics and stability in ESG metrics. Engagement with companies in which we invest our clients' assets occurs at multiple levels within BlackRock. Where investment teams choose to leverage engagement, this can take a variety of forms but, in essence, the portfolio management team would seek to have regular and continuing dialogue with executives or board directors of engaged investee companies to advance sound governance and sustainable business practices targeted at the identified ESG characteristics and principal adverse indicators, as well as to understand the effectiveness of the company's management and oversight of activities designed to address the identified ESG issues. Engagement also allows the portfolio management team to provide feedback on company practices and disclosures.

The Benchmark Index is designated as a reference benchmark to determine whether the Fund is aligned with the environmental and/or social characteristics that it promotes.

#### **B. No significant harm to the sustainable investment objective**

The Benchmark Index selects multilateral development banks bonds based on their issuer whose aim is to foster economic and social progress mostly in developing countries by making finance available for sustainable projects. In addition, the Fund's Benchmark Index incorporates screens to ensure that each

issuer disclose they have safeguard policies in place to mitigate and reduce environmental and social risks in the public domain.

By tracking the Benchmark Index which incorporates the criteria for selecting multilateral development banks bonds, the Investment Manager has determined that, at each index rebalance (or as soon as reasonably possible and practicable thereafter), the Fund's investments in bonds issued by multilateral development banks that meet the index criteria will not cause significant harm to any environmental or social sustainable objective within the meaning of applicable law and regulation.

Where any of the Fund's investments cease to meet the above selection criteria, the Fund may continue to hold such investments until such time as the relevant securities cease to form part of the Benchmark Index and it is possible and practicable (in the Investment Manager's view) to liquidate the position.

The indicators for adverse impacts on sustainability factors are taken into account at each index rebalance and are assessed at the issuance level by the index provider based on an assessment of safeguard policies in place to mitigate and reduce environmental and social risks in the public domain.

The mandatory indicators for adverse impacts on sustainability factors (as set out in the Regulatory Technical Standards (RTS) under the SFDR) are considered at each index rebalance through the assessment of the Fund's investments qualifying as sustainable investments.

The indicators for adverse impacts on sustainability factors are taken into account at each index rebalance and are assessed at the issuer level by the index provider based on an assessment of the safeguard policies that the multilateral development banks disclose that they have in place to mitigate and reduce environmental and social risks in the public domain.

The Fund's Benchmark Index excludes issuers with a "red" ESG controversy flag which excludes issuers which have been determined by the index provider to be in violation of the UN Guiding Principles on Business and Human Rights and OECD Guidelines for Multinational Enterprises.

### **C. Sustainable investment objective of the financial product**

The sustainable investment objective of this Fund is to invest in a portfolio of fixed income securities that, as far as possible and practicable, consists of the component securities of the FTSE World Broad Investment-Grade USD Multilateral Development Bank Bond Capped Index, this Fund's Benchmark Index. The Fund seeks to achieve its sustainable investment objective by tracking the Benchmark Index which comprises multilateral development bank bonds which must be issued by a multilateral development bank with a mission statement that states the intent to promote sustainable economic development in developing countries by financially supporting their sustainable development goals or by providing non-financial support for infrastructure development such as policy advice or technical assistance.

The Benchmark Index measures the performance of a sub-set of global US Dollar denominated, fixed-rate, investment grade multilateral development bank debt in the FTSE World Broad Investment-Grade Bond Index. Multilateral development banks are supranational institutions set up by sovereign states. The multilateral development banks' aim is to foster economic and social progress mostly in developing countries by making finance available for sustainable projects.

In accordance with the Benchmark Index methodology, securities are eligible for inclusion only if they are issued by a multilateral development bank the shareholders of which are (but are not limited to) all of the G7 country members, and which has a mission statement that states the intent to promote sustainable economic development in developing countries by financially supporting their sustainable development goals or by providing non-financial support for infrastructure development such as policy advice or technical assistance.

The Benchmark Index excludes issuers which are classified as violating commonly accepted international norms and standards enshrined in the United Nations Global Compact (UNGC) Principles.

The Benchmark Index also excludes issuers that have not disclosed that they have safeguarding policies in place to mitigate and reduce environmental and social risks in the public domain arising from the projects they finance.

For more information on where details of the methodology of the Benchmark Index see 'Section L - Attainment of the sustainable investment objective.'

#### **D. Investment strategy**

The investment policy of the Fund is to invest in a portfolio of fixed income securities that as far as possible and practicable consists of the component securities of the Benchmark Index which incorporates certain ESG criteria in the selection of constituents. The index methodology of its Benchmark Index is described above see 'Section C - Environmental or social characteristics of the financial product.'

By investing in the constituents of its Benchmark Index, the Fund's investment strategy enables it to invest in multilateral development bank bonds (as determined by the index provider) and comply with the ESG requirements of its Benchmark Index as determined by the index provider. In the event that any investments cease to comply, the Fund may continue to hold such investments only until such time as the relevant securities cease to form part of the Benchmark Index and it is possible and practicable (in the Investment Manager's view) to liquidate the position.

The Fund may use optimisation techniques in order to achieve a similar return to the Benchmark Index which means that it is permitted to invest in securities that are not underlying constituents of the Benchmark Index where such securities provide similar performance (with matching risk profile) to certain securities that make up the Benchmark Index. If the Fund does so, its investment strategy is to invest only in issuers in the Benchmark Index or in issuers that meet the ESG requirements of the Benchmark Index at the time of purchase. If such securities cease to comply with the ESG requirements of the Benchmark Index, the Fund may hold such securities only until the next portfolio rebalance and when it is possible and practicable (in the Investment Manager's view) to liquidate the position.

The strategy is implemented at each portfolio rebalance of the Fund, which follows the index rebalance of its Benchmark Index.

The Investment Manager carries out due diligence on the index providers and engages with them on an ongoing basis with regard to index methodologies including their assessment of good governance criteria set out by the SFDR which include sound management structures, employee relations, remuneration of staff and tax compliance at the level of investee companies.

The binding elements of the investment strategy are that the Fund will invest in a portfolio of fixed income securities that as far as possible and practicable consists of the component securities of the Benchmark Index and thereby comply with the ESG characteristics of its Benchmark Index.

As the Fund is able to use optimisation techniques and may invest in securities that are not underlying constituents of the Benchmark Index, where it does so, its investment strategy is to invest only in issuers in the Benchmark Index or in issuers that meet the ESG requirements of the Benchmark Index at the time of purchase.

In the event that any investments cease to comply with the ESG requirements of the Benchmark Index, the Fund may continue to hold such investments only until such time as the relevant securities cease to form part of the Benchmark Index and/or it is possible and practicable (in the Investment Manager's view) to liquidate the position.

#### Consideration of principal adverse impacts (PAIs) on sustainability factors

The Fund takes into consideration principal adverse impacts on sustainability factors as outlined in the question above see 'Section B - No significant harm to the sustainable investment objective.'

The Fund's annual report will include information on the principal adverse impacts on sustainability factors.

#### Good governance policy

The methodology of the Benchmark index limits the fund's investments to Supranational issuers and therefore are not subject to good governance requirements.

### **E. Proportion of Investments**

The Fund seeks to invest in a portfolio of securities that as far as possible and practicable consists of the component securities of the Benchmark Index.

It is expected that at least 90% of the Fund's assets will be invested in either securities within the Benchmark Index or in securities that meet the ESG selection criteria of the Benchmark Index. As such, at each index rebalance (or as soon as reasonably possible and practicable thereafter), the Investment Manager has determined that at least 90% of the Fund's assets will be invested in investments which qualify as sustainable investments. In the event that any investments cease to comply with the ESG requirements of the Benchmark Index (including where any investments cease to qualify as sustainable investments) the Fund may continue to hold such investments until such time as the relevant securities cease to form part of the Benchmark Index (or otherwise cease to meet the ESG selection criteria of the Benchmark Index) and it is possible and practicable (in the Investment Manager's view) to liquidate the position. As a result, the Fund may hold less than 90% of its assets in investments qualifying as sustainable in between index rebalances.

The Fund may invest up to 10% of its assets in other investments.

The Fund may use derivatives for investment purposes and for the purposes of efficient portfolio management in connection with the environmental or social characteristics promoted by the Fund. Where

the Fund uses derivatives for promoting environmental or social characteristics, any ESG rating or analyses referenced above will apply to the underlying investment.

The Fund does not currently commit to invest more than 0% of its assets in Sustainable Investments with an environmental objective aligned with the EU Taxonomy, however, these investments may form part of the portfolio.

The Fund does not currently commit to invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The Fund does not commit to making investments in transitional and enabling activities, however, these investments may form part of the portfolio.

This Fund does not currently commit to investing more than 0% of its assets in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

A minimum of 90% of the Fund's assets will be invested in sustainable investments. These sustainable investments will be sustainable investments with a social objective. The assessment of the Fund's investments qualifying as sustainable investments is determined on or around each index rebalance, where the Fund's portfolio is rebalanced in line with its Benchmark Index.

Other holdings may include cash, money market funds and derivatives. Such investments may only be used for the purpose of efficient portfolio management, except for derivatives used for currency hedging for any currency hedged share class.

Any ESG rating or analyses applied by the index provider will apply only to the derivatives relating to individual issuers used by the Fund. Derivatives based on financial indices, interest rates, or foreign exchange instruments will not be considered against minimum environmental or social safeguards.

## **F. Monitoring of sustainable investment objective**

### Ongoing product integrity monitoring

BlackRock monitors the Fund's adherence to the environmental and social characteristics which the Fund seeks to promote. The objective of the Fund is to track the performance of the Benchmark Index. The environmental and/or social characteristics of the Fund are embedded into the Benchmark Index methodology and the Fund is monitored in a manner that seeks to identify exceptions to the Fund's sustainable commitments being met as at each rebalance.

BlackRock monitors Fund and index-level data to track the Fund's adherence to these characteristics as at each rebalance.

BlackRock also monitors the tracking error of the Fund and reports this to investors as part of the annual and semi-annual report and accounts. Information on the anticipated tracking error is also published in the Fund's prospectus.

## G. Methodologies

The Fund seeks to track the performance of the Benchmark Index which incorporates certain ESG criteria in the selection of constituents, according to its methodology (outlined above in Section C and detailed in section L).

### Methodologies

In addition, the following methodologies are used to measure how the social or environmental characteristics promoted by the Fund are met:

The Benchmark Index uses Sustainalytics Global Standard Screening (GSS). For further information, please see the index methodology.

### Sustainable Investments Methodology

Sustainable investments are identified based on a four-part assessment:

- (i) Economic activity contribution to environmental and/or social objectives;
- (ii) Do no significant harm;
- (iii) Meets minimum safeguards; and
- (iv) Good governance (where relevant)

It is necessary for an investment to meet the four limbs of this test to be considered a “Sustainable Investment”. Sustainable Investments are subject to a robust oversight process to ensure that regulatory standards are met.

- (i) Economic activity contribution to environmental and/or social objectives.

Environmental and social objectives.

BlackRock identifies Sustainable Investments which contribute to a range of environmental and / or social objectives which may include but are not limited to alternative and renewable energy, energy efficiency, pollution prevention or mitigation, reuse and recycling, health, nutrition, sanitation and education and the UN Sustainable Development Goals and other sustainability-related frameworks (together the “Environmental and Social Objectives”).

Economic activity assessment.

An investment will be a Sustainable Investment (subject to it satisfying the other three limbs):

Business activity.

- Where 20% or more of its revenue attributable to products and/or services is systematically mapped as contributing to Environmental and/or Social Objectives using third-party vendor data.

Business practices.

- Where the issuer has set a de-carbonisation target in accordance with the Science Based Targets initiatives (SBTi) as validated by third-party vendor data. The SBTi seeks to provide a clearly defined pathway for companies and financial institutions to reduce greenhouse gas (GHG) emissions to align with the goals of the Paris Agreement and help prevent the worst impacts of climate change.

Fixed income securities.

- Where a fund invests in a use-of-proceeds bond, such use-of-proceed bond will be a Sustainable Investment where the use of proceeds substantially contributes to an Environmental and/or Social Objective as determined by fundamental assessment.

A fund's Sustainable Investments may have any or all of the above Environmental and/or Social Objectives depending on the investment strategy of the fund. In identifying which underlying holdings are Sustainable Investments, BlackRock may have regard to the index provider's assessment of sustainable investments, or any other exclusionary criteria incorporated within the fund's benchmark index methodology.

(ii) Do no significant harm (DNSH)

At each index rebalance, all investments qualifying as sustainable are assessed against certain minimum environmental and social indicators. As part of the assessment, companies are assessed on their involvement in activities deemed to have highly negative environmental and social impacts. Where a company has been identified as being involved in activities with highly negative environmental and social impacts, it shall not be eligible as a sustainable investment.

Where a fund invests in use of proceeds bonds, such as green bonds, the assessment will be conducted at an issuance level based on the use of the proceeds of the bonds which must be formally and exclusively applied to promote climate or other environmental or social sustainability purposes. In addition, certain minimum safeguards and eligibility exclusions are incorporated in the selection of green bonds to avoid exposure to bonds associated with activities deemed to have highly negative environmental and societal impacts.

The mandatory indicators for adverse impacts on sustainability factors (as set out in the Regulatory Technical Standards (RTS) under the SFDR) are considered at each index rebalance through the assessment of the Fund's investments qualifying as sustainable.

Following this assessment, the following investments shall not qualify as Sustainable Investments: (1) companies deemed to be deriving at least 1% of their revenue from thermal coal which is significantly carbon intensive and a major contributor to greenhouse gas emissions (taking into account indicators relating to GHG emissions) (2) companies that have been deemed to be involved in severe ESG related controversies (taking into account indicators relating to greenhouse gas emissions, biodiversity, water, waste and social and employee matters), and (3) companies which are deemed to be lagging industry peers based on their high exposure and failure to manage significant ESG risks (taking into account indicators relating to greenhouse gas emissions, biodiversity, water, waste, unadjusted gender pay gap and board gender diversity).

In addition, companies which are classified as violating or are at risk of violating commonly accepted international norms and standards, enshrined in the United Nations Global Compact (UNGC) Principles, the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational

Enterprises, the UN Guiding Principles on Business and Human Rights (UNGPs) and their underlying conventions shall not qualify as Sustainable Investments. Companies determined to have any tie to controversial weapons (taking into account indicators concerning ties to controversial weapons) shall not qualify as Sustainable Investments.

(iii) Meet minimum safeguards.

Issuers which are classified as violating or are at risk of violating commonly accepted international norms and standards, enshrined in the UNGC Principles, the OECD Guidelines for Multinational Enterprises, the UNGPs and their underlying conventions shall not qualify as Sustainable Investments.

## **H. Data sources and processing**

### Data Sources

BlackRock Portfolio Managers have access to research, data, tools, and analytics to integrate ESG insights into their investment process. Aladdin is the operating system that connects the data, people, and technology necessary to manage portfolios in real time, as well as the engine behind BlackRock's ESG analytics and reporting capabilities. BlackRock's Portfolio Managers use Aladdin to make investment decisions, monitor portfolios and to access index information that informs the investment process to attain ESG characteristics of the Fund.

ESG datasets are sourced from external third-party data providers and index providers, including but not limited to MSCI, Sustainalytics, Refinitiv, S&P and Clarity AI. These datasets may include headline ESG scores, carbon emissions data, business involvement metrics or controversies and have been incorporated into Aladdin tools that are available to Portfolio Managers and employed in BlackRock investment strategies. Such tools support the full investment process, from research, to portfolio construction and modelling, to reporting.

### Measures taken to ensure Data Quality

BlackRock applies a comprehensive due diligence process to evaluate provider offerings with highly targeted methodology reviews and coverage assessments based on the sustainable investment strategy (and the environmental and social characteristics or sustainable investment objective) of the product. Our process entails both qualitative and quantitative analysis to assess the suitability of data products in line with regulatory standards as applicable.

We assess ESG providers and data across five core areas outlined below:

1. **Data Collection:** this includes but is not limited to assessing the data providers underlying data sources, technology used to capture data, process to identify misinformation and any use of machine learning or human data collection approaches. We will also consider planned improvements.
2. **Data Coverage:** our assessment includes but is not limited to the extent to which a data package provides coverage across our investible universe of issuers and asset classes. This will include consideration of the treatment of parent companies and their subsidiaries as well as use of estimated data or reported data.

3. Methodology: our assessment includes but is not limited consideration of the third-party providers methodologies employed, including considering the collection and calculation approaches, alignment to industry or regulatory standards or frameworks, materiality thresholds and their approach to data gaps.
4. Data Verification: our assessment will include but is not limited to the third-party providers approach to verification of data collected and quality assurance processes including their engagement with issuers.
5. Operations: we will assess a variety of aspects of a data vendors' operations, including but not limited to their policies and procedures (including consideration of any conflicts of interest) the size and experience of their data research teams, their training programs, and their use of third-party outsourcers.

Additionally, BlackRock, actively participates in any relevant provider consultations regarding proposed changes to methodologies as it pertains to third party data sets or index methodologies and submits comprehensive feedback and recommendations to data provider technical teams. BlackRock often has ongoing engagement with ESG data providers including index providers to keep abreast of industry developments.

#### How data is processed

At BlackRock, our internal processes are focused on delivering high-quality standardised and consistent data to be used by investment professionals and for transparency and reporting purposes. Data, including ESG data, received through our existing interfaces, and then processed through a series of quality control and completeness checks which seeks to ensure that data is high-quality data before being made available for use downstream within BlackRock systems and applications, such as Aladdin. BlackRock's integrated technology enables us to compile data about issuers and investments across a variety of environmental, social and governance metrics and a variety of data providers and make those available to investment teams and other support and control functions such as risk management.

#### Use of Estimated Data

BlackRock strives to capture as much reported data from companies via 3rd party data providers as practicable, however, industry standards around disclosure frameworks are still evolving, particularly with respect to forward looking indicators. As a result, in certain cases we rely on estimated or proxy measures from data providers to cover our broad investible universe of issuers. Due to current challenges in the data landscape, while BlackRock relies on material amount of estimated data across our investible universe, the levels of which may vary from data set to data set, we seek to ensure that use of estimates is in line with regulatory guidance and that we have necessary documentation and transparency from data providers on their methodologies. BlackRock recognizes the importance in improving its data quality and data coverage and continues to evolve the data sets available to its investment professionals and other teams. Where required by local country-level regulations, funds may state explicit data coverage levels. BlackRock seeks to understand the use of estimated data in index methodologies and ensure that their approaches are robust and in line with applicable regulatory requirements and index methodologies.

## I. Limitations to methodologies and data

### Limitations to Methodology

Sustainable investing is an evolving space, both in terms of industry understanding but also the regulatory frameworks on both a regional and global basis. BlackRock continues to monitor developments in the EU's ongoing implementation of its framework for sustainable investing and its investment methodologies seeking to ensure alignment as the regulatory environment changes. As a result, BlackRock may update these disclosures, and the methodologies and sources of data used, at any time in the future as market practice evolves or further regulatory guidance becomes available.

Screening of a Benchmark Index against its ESG criteria is generally carried out by an index provider only at index rebalances. Companies which have previously met the screening criteria of a Benchmark Index and have therefore been included in the Benchmark Index and the Fund, may unexpectedly or suddenly be impacted by an event of serious controversy which negatively impacts their price and, hence, the performance of the Fund. Where these companies are existing constituents of the Benchmark Index, they will remain in the Benchmark Index and therefore continue to be held by the Fund until the next scheduled rebalancing (or periodic review) when the relevant company ceases to form part of the Benchmark Index and it is possible and practicable (in the Investment Manager's view) to liquidate the position. A Fund tracking such Benchmark Index may therefore cease to meet the ESG criteria between index rebalances (or index periodic reviews) until the Benchmark Index is rebalanced back in line with its index criteria, at which point the Fund will also be rebalanced in line with its Benchmark Index. Similarly index methodologies that commit to investing in a minimum percentage of Sustainable Investments may also fall below that level in between rebalances but will be brought back into line at the point of rebalance (or as soon as practicable thereafter).

Limitations in relation to the data sources are noted below.

### Limitations to Data

ESG data sets are constantly changing and improving as disclosure standards, regulatory frameworks and industry practice evolve. BlackRock continues to work with a broad range of market participants to improve data quality.

Whilst each ESG metric may come with its own individual limitations, data limitations may broadly be considered to include, but not be limited to:

- Lack of availability of certain ESG metrics due to differing reporting and disclosure standards impacting issuers, geographies, or sectors.
- Nascent statutory corporate reporting standards regarding sustainability leading to differences in the extent to which companies themselves can report against regulatory criteria and therefore some metric coverage levels may be low.
- Inconsistent use and levels of reported vs estimated ESG data across different data providers, taken at varied time periods which makes comparability a challenge.
- Estimated data by its nature may vary from realized figures due to the assumptions or hypothesis employed by data providers.

- Differing views or assessments of issuers due to differing provider methodologies or use of subjective criteria.
- Most corporate ESG reporting, and disclosure takes place on an annual basis and takes significant time to produce meaning that this data is produced on a lag relative to financial data. There may also be inconsistent data refresh frequencies across different data providers incorporating such data into their data sets.
- Coverage and applicability of data across asset classes and indicators may vary.
- Forward looking data, such as climate related targets may vary significantly from historic and current point in time metrics.

For more information about how metrics that are presented with sustainability indicators are calculated, please see the Fund's annual report.

### Sustainable Investments and Environmental and Social criteria

Sustainable investing and understanding of sustainability is evolving along with the data environment. Industry participants, including index provider face challenges in identifying a single metric or set of standardized metrics to provide a complete view on a company or an investment. BlackRock has therefore established a framework to identify sustainable investments, taking into account the regulatory requirements and index provider methodologies.

BlackRock leverages third-party index provider methodologies and data in assessing whether investments cause significant harm and have good governance practices. There may be some circumstances where data is unavailable, incomplete, or inaccurate. Despite reasonable efforts, information may not always be available in which case an assessment will be made by the index provider based on their knowledge of the investment or industry. In certain cases, data may reflect actions that issuers may have taken only after the fact, and do not reflect all potential instances of significant harm.

BlackRock undertakes thorough due diligence on index provider sustainable investment methodologies to ensure that they align with BlackRock's views on Sustainable Investments.

#### **J. Due Diligence**

The Investment Manager carries out due diligence on the index providers and engages with them on an ongoing basis with regard to index methodologies including their assessment of good governance criteria set out by the SFDR which include sound management structures, employee relations, remuneration of staff and tax compliance at the level of investee companies.

#### **K. Engagement Policies**

##### The Fund

The Fund does not use engagement as a means of meeting its binding commitments to environmental or social characteristics or sustainable investment objectives. The Investment Manager does not perform direct engagement with the companies / issuers within the index but does engage directly with the index and data providers to ensure better analytics and stability in ESG metrics.

## General

Engagement with companies in which we invest our clients' assets occurs at multiple levels within BlackRock.

Where engagement is specifically identified by a particular portfolio management team as one of the means by which they seek to demonstrate a commitment to environment, social and governance issues within the context of SFDR, the methods by which the effectiveness of such engagement policy and the ways in which such an engagement policy may be adapted in the event that they do not achieve the desired impact (usually expressed as a reduction in specified principal adverse indicators) would be described in the prospectus and website disclosures particular to that fund.

Where investment teams chooses to leverage engagement, this can take a variety of forms but, in essence, the portfolio management team would seek to have regular and continuing dialogue with executives or board directors of engaged investee companies to advance sound governance and sustainable business practices targeted at the identified ESG characteristics and principal adverse indicators, as well as to understand the effectiveness of the company's management and oversight of activities designed to address the identified ESG issues. Engagement also allows the portfolio management team to provide feedback on company practices and disclosures.

Where a relevant portfolio management team has concerns about a company's approach to the identified ESG characteristics and/or principal adverse indicators, they may choose to explain their expectations to the company's board or management and may signal through voting at general meetings that they have outstanding concerns, generally by voting against the re-election of directors they view as having responsibility for improvements in the identified ESG characteristics or principal adverse indicators.

Separate from the activities of any particular portfolio management team, at the highest level, as part of its fiduciary approach, BlackRock has determined that it is in the best long-term interest of its clients to promote sound corporate governance as an informed, engaged shareholder. At BlackRock, this is the responsibility of BlackRock Investment Stewardship. Principally through the work of BIS team, BlackRock meets the requirements in the Shareholder Rights Directive II ("SRD II") relating to engagement with public companies and other parties in the investment ecosystem. A copy of BlackRock's SRD II engagement policy can be found at <https://www.blackrock.com/corporate/literature/publication/blk-shareholder-rights-directiveii-engagement-policy-2022.pdf>.

BlackRock's approach to investment stewardship is outlined in the BIS Global Principles and market-level voting guidelines. The BIS Global Principles set out our stewardship philosophy and our views on corporate governance and sustainable business practices that support long-term value creation by companies. We recognize that accepted standards and norms of corporate governance differ between markets; however, we believe there are certain fundamental elements of governance practice that are intrinsic globally to a company's ability to create long-term value. Our market-specific voting guidelines provide detail on how BIS implements the Global Principles – taking into consideration local market standards and norms – and inform our voting decisions in relation to specific ballot items for shareholder meetings. BlackRock's overall approach to investment stewardship and engagement can be found at: <https://www.blackrock.com/uk/professionals/solutions/shareholder-rights-directive> and <https://www.blackrock.com/corporate/about-us/investment-stewardship>.

In undertaking its engagement, BIS may focus on particular ESG themes, which are outlined in BlackRock's voting priorities <https://www.blackrock.com/corporate/literature/publication/blk-stewardship-priorities-final.pdf>.

### **I. Attainment of the sustainable investment objective**

This Fund seeks to achieve the environmental and social characteristics it promotes by tracking the performance of the FTSE World Broad Investment-Grade USD Multilateral Development Bank Bond Capped Index, which seeks to select bonds issued by multilateral development banks and which incorporates the index provider's ESG selection criteria.

At each index rebalance, the index provider applies the ESG selection criteria to the Parent Index to exclude issuers that do not meet such ESG selection criteria.

At each index rebalance (or as soon as reasonably possible and practicable thereafter), the portfolio of the Fund is also rebalanced in line with its Benchmark Index.

As a result of the application of the ESG selection criteria of the Benchmark Index, the portfolio of the Fund is expected to be reduced compared to the Bloomberg Euro Aggregate Bond Index, a broad market index comprised of fixed income securities.

The methodology of the Fund's Benchmark Index can be found by copying and pasting the following link into your web browser: [https://research.ftserussell.com/products/downloads/FTSE\\_World\\_Broad\\_Investment-Grade\\_USD\\_Multilateral\\_Development\\_Bank\\_Bond\\_Capped\\_Index\\_CFIUMDB\\_Ground\\_Rules.pdf](https://research.ftserussell.com/products/downloads/FTSE_World_Broad_Investment-Grade_USD_Multilateral_Development_Bank_Bond_Capped_Index_CFIUMDB_Ground_Rules.pdf).

Further details of the Fund's Benchmark Index (including its constituents) are also available on the index provider's website at: <http://www.yieldbook.com/m/indices/search.shtml>.

**This website disclosure (“Disclosure”) is for distribution to Professional Clients (as defined by the FCA or MiFID rules) and Qualified Investors only and should not be relied upon by any other persons.**

Issued by BlackRock Asset Management (Ireland) Ltd., authorised and regulated by the Central Bank of Ireland. Registered office: 2 Ballsbridge Park, Dublin, D04 YW83, Ireland. The registered number is 227552. For more information, please see the website: [www.blackrock.com](http://www.blackrock.com). For your protection telephone calls are usually recorded. BlackRock is a trading name of BlackRock Asset Management (Ireland) Ltd.

The information contained herein, is proprietary in nature and has been provided to you on a confidential basis and may only be distributed without the prior consent of BlackRock to (i) your affiliates, and (ii) your professional advisers, provided that they are subject to a duty of confidentiality.

This Disclosure is for information purposes only and does not constitute an offer or invitation to anyone to invest in any BlackRock funds or products and has not been prepared in connection with any such offer.

The information and opinions contained in this Disclosure are derived from proprietary and non-proprietary sources deemed by BlackRock to be reliable, are not necessarily all-inclusive and are not guaranteed as to accuracy. As such, no warranty of accuracy or reliability is given and no responsibility arising in any other way for errors and omissions (including responsibility to any person by reason of negligence) is accepted by BlackRock, its officers, employees or agents.

This Disclosure is provided for the information of its intended recipient and BlackRock expressly disclaims any liability which may result from any use of this information, including, but not limited to, its use in the preparation of financial reports or other disclosures.

**Capital at risk.** The value of investments and the income from them can fall as well as rise and is not guaranteed. You may not get back the amount originally invested. Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Any research in this Disclosure has been procured and may have been acted on by BlackRock for its own purpose. The results of such research are being made available only incidentally. The views expressed do not constitute investment or any other advice and are subject to change. They do not necessarily reflect the views of any company in the BlackRock Group or any part thereof and no assurances are made as to their accuracy.
