

Key risk factors

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

The Company's investments may be subject to liquidity constraints, which means that shares may trade less frequently and in small volumes, for instance smaller companies. As a result, changes in the value of investments may be more unpredictable. In certain cases, it may not be possible to sell the security at the last market price quoted or at a value considered to be fairest.

Overseas investments will be affected by currency exchange rate fluctuations.

The Company may from time to time utilize gearing. A fuller definition of gearing is given in the glossary.

NMPI status The Company currently conducts its affairs so that its securities can be recommended by IFAs (Independent Financial Advisers) to ordinary retail investors in accordance with the Financial Conduct Authority rules in relation to non-mainstream pooled investments (NMPI) and intends to continue to do so for the foreseeable future. The securities are excluded from the Financial Conduct Authority's restrictions which apply to non-mainstream pooled investments because they are shares in an investment trust.

The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at: blackrock.com/uk/brsc.

The information contained in this release was correct as at 28 February 2021. Information on the Company's up to date net asset values can be found on the London Stock Exchange Website at: <https://www.londonstockexchange.com/news?tab=news-explorer>

Company objective

To achieve long term capital growth for shareholders through investment mainly in smaller UK quoted companies.

Fund information (as at 28/02/21)

Net asset value capital only (debt at par value)	1,777.70p
Net asset value capital only (debt at fair value)	1,768.06p
Net asset value incl. income (debt at par value ¹)	1,784.45p
Net asset value incl. income (debt at fair value ¹)	1,774.81p
Share price	1,698.00p
Discount to NAV incl. income (debt at par value)	4.8%
Discount to NAV incl. income (debt at fair value)	4.3%
Net yield ²	1.9%
Gross assets ³	£960.9m
Gearing range as a % of net assets	0-15%
Net gearing including income (debt at par)	8.8%
Ongoing charges ratio ⁴	0.7%
Issued capital – ordinary shares (excluding shares in treasury) ⁵	48,829,792

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

¹ includes net revenue of 6.75p.

² Yield calculations are based on dividends announced in the last 12 months as at the date of release of this announcement, and comprise the second interim dividend of 19.7 pence per share (announced on 3 June 2020, ex-dividend on 11 June 2020) and the first interim dividend of 12.8 pence per share (announced on 5 November 2020, ex-dividend on 12 November 2020, paid on 26 November 2020).

³ includes current year revenue.

⁴ As reported in the Annual Financial Report for the year ended 29 February 2020 the Ongoing Charges Ratio (OCR) was 0.7%. The OCR is calculated as a percentage of net assets and using operating expenses, excluding performance fees, finance costs and taxation.

⁵ excludes 1,163,731 shares held in treasury.

Source: BlackRock and Datastream, 28 February 2021

¹ The Company's benchmark is the Numis Smaller Companies plus AIM (ex Investment Companies).

The annual Net Asset Value (NAV) performance statistics to the last quarter end (in the first table) are based on a NAV including income and with debt at par, with any dividends reinvested on the ex-dividend date, net of ongoing charges and any applicable performance fee.

Performance calculations in the second table are based on a capital only Net Asset Value (NAV) with debt at par, without income reinvested and net of ongoing charges and any performance fee. Share price performance calculations also exclude income reinvestment. The debenture stock and long dated note issued by the Company are valued at par which represents the value due to be paid to holders of the debt at maturity. The debenture and the long dated note are both forms of long term loan. Additional definitions are given in the glossary.

A fuller definition of ongoing charges, which includes the annual management fee, is given in the glossary. Details of the management fee are given in the key company details section overleaf. Share price performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date.

The performance of the Company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance. The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at: blackrock.co.uk/brsc.

Money Observer's Rated Funds recognise open-ended funds and closed-ended investment companies that have demonstrated consistent outperformance or that have been chosen as ideal routes into specific markets and sectors in the current investment environment.
Effective date: 7 February 2020

Highly commended (runner up) in the Moneywise Investment Trust Awards 2020.
Effective date: 29 March 2020

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Comments from the Portfolio Manager, Roland Arnold

Please note that the commentary below includes historic information on the Company's NAV performance and index performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of future results.

During February the Company's NAV per share rose by 2.8%¹ to 1,777.70p, underperforming our benchmark index which returned 4.5%¹; for comparison the FTSE 100 Index rose by 1.2%¹ (all calculations are on a capital only basis).

Equity markets rose in February on the back of continued progress made with the vaccine deployment leading to optimism around a strong economic restart. Rising inflation expectations caused bond yields to spike which continued to fuel the rotation away from long duration growth assets towards more cyclical and value areas of the market. December's GDP (Gross Domestic Product) release showed the UK recording its largest annual contraction since 1709. However, the fall of -9.9% was less severe than many COVID-19 driven downgrade forecasts, which led Sterling higher and, as a result, UK small & mid-caps outperformed their larger peers.

Technical factors were the key driver of the Company's performance during February. Profit taking from many of last year's strong performing growth stocks, and the rotation into beneficiaries of the reopening trade caused the portfolio to lag the rising benchmark. IntegraFin, YouGov and Impax Asset Management were among the largest detractors during the month despite no negative newsflow. Only last month Impax reported another quarter of solid AUM (assets under management) growth, therefore, we believe these falls will be temporary and we remain positive on the outlook for these holdings.

Despite trailing our benchmark, the reporting season has been generally positive for many of our holdings, which have continued to trade well. The largest positive contributor during the month was our new holding in Moonpig, which we purchased at IPO (Initial Public Offering) during the month. Our investment case for the business is centred around three key growth drivers: customer acquisitions, orders per user and order value, and later in the month the company provided an encouraging trading update showing growth across all three of these drivers. Shares in Ergomed continued to push higher following its January trading update which highlighted that positive trading in its pharmacovigilance and its Clinical Research Organisation had continued into year end and, as a result, 2020 full year earnings will be ahead of expectations.

The vaccine rollout program continues to gather pace and the market is now heavily focused on the 'reopening trade' and the pace at which the world can return to some level of normality. With the UK ahead in its vaccine rollout we are cautiously optimistic around the pace of reopening in the UK. However, questions remain over the vaccine rollout elsewhere in the world and the potential for new variants to resist the vaccine, and as such there remains potential for market setbacks and sharp spikes in volatility. Strengthening sterling and the steepening yield curve has

caused a challenging headwind for many global facing growth companies, which this Company owns. However, we do not believe this will be a long-term issue as we do not see persistent higher levels of inflation ahead.

We therefore remain focused on bottom-up company fundamentals, with a bias towards high quality market leading global businesses, which are operating in attractive end markets and run by strong management teams. This is a style that has demonstrably worked over the long-term, and the positive trading updates that we have heard from our companies in recent weeks reassure us that this is the right strategy that will reward our shareholders over the long-term.

Glossary of Terms

AIM

AIM is the London Stock Exchange's international market for smaller growing companies. The AIM market has no restrictions on market capitalisation, and financial reporting is more flexible than for companies listed on the main market of the London Stock Exchange.

Debenture and Long Term Note

Debentures are a common form of long-term loan that can be taken out by a company. These loans are normally repayable on a fixed date and pay a fixed rate of interest. The Company has in issue a £15 million debenture that will be redeemed in 2022, and carries an interest cost of 7.75%.

A long term note is also a form of long term loan. The Company has in issue a £25 million long term note which redeems in 2037 and carries an interest cost of 2.74%, and a £20 million long term note which redeems in 2044 and carries an interest cost of 2.41%.

Discount/Premium

Investment trust shares frequently trade at a discount or premium to the NAV. This occurs when the share price is less than (a discount) or more than (a premium) the NAV. The discount or premium is the difference between the share price (based on mid-market share prices) and the NAV, expressed as a percentage of the NAV. Discounts and premiums are mainly the consequence of supply and demand for the shares on the stock market.

Gearing

Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favorable situation or a particularly attractive stock without having to sell existing investments. Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

Net yield

The net yield is calculated using total dividends declared in the last 12 months (as at date of this factsheet) as a percentage of the month end share price.

NAV (Net Asset Value) and diluted NAV

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

Ongoing charges ratio

Ongoing charges (%) =

$$\frac{\text{Annualised ongoing charges}}{\text{Average undiluted net asset value in the period}}$$

Ongoing charges are those expenses of a type which are likely to recur in the foreseeable future, whether charged to capital or revenue, and which relate to the operation of the investment company as a collective fund, excluding the costs of acquisition/disposal of investments, financing charges and gains/losses arising on investments. Ongoing charges are based on costs incurred in the year as being the best estimate of future costs and include the annual management fee.

Treasury shares

Treasury shares are shares that a company keeps in its own treasury which are not currently issued to the public. These shares do not pay dividends, have no voting rights and are not included in a Company's total issued share capital amount for the purpose of calculating percentage ownership. Treasury stock may have come from a repurchase or buyback from shareholders, or it may have never been issued to the public in the first place. Treasury shares may be reissued from treasury to the public to meet demand for a company's shares in certain circumstances.

Risk Warnings

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Trust Specific Risks

Smaller companies Risk. Smaller company investments are often associated with greater investment risk than those of larger company shares.

Gearing Risk. Investment strategies, such as borrowing, used by the Trust can result in even larger losses suffered when the value of the underlying investments fall

Liquidity Risk. The Trust's investments may have low liquidity which often causes the value of these investments to be less predictable. In extreme cases, the Company may not be able to realise the investment at the latest market price or at a price considered fair.

Important Information

Issued by BlackRock Investment Management (UK) Limited, authorised and regulated by the Financial Conduct Authority. Registered office: 12 Throgmorton Avenue, London, EC2N 2DL. Tel: + 44 (0)20 7743 3000. Registered in England and Wales No. 2020394. For your protection telephone calls are usually recorded. BlackRock is a trading name of BlackRock Investment Management (UK) Limited. Please refer to the Financial Conduct Authority website for a list of authorised activities conducted by BlackRock.

The Company is managed by BlackRock Fund Managers Limited (BFM) as the AIFM. BFM has delegated certain investment management and other ancillary services to BlackRock Investment Management (UK) Limited. The Company's shares are traded on the London Stock Exchange and dealing may only be through a member of the Exchange. The Company will not invest more than 15% of its gross assets in other listed investment trusts. SEDOL™ is a trademark of the London Stock Exchange plc and is used under licence.

Net Asset Value (NAV) performance is not the same as share price performance, and shareholders may realise returns that are lower or higher than NAV performance.

BlackRock Smaller Companies Trust plc currently conduct their affairs so that their securities can be recommended by IFAs to ordinary retail investors in accordance with the Financial Conduct Authority's rules in relation to nonmainstream investment products and intend to continue to do so for the foreseeable future. The securities are excluded from the Financial Conduct Authority's restrictions which apply to non-mainstream investment products because they are securities issued by investment trusts.

BlackRock has not considered the suitability of this investment against your individual needs and risk tolerance.
