

Key risk factors

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

The Company invests in a large portion of assets that are denominated in currencies other than sterling; hence changes in the relevant exchange rate will affect the value of the investment.

The Company can use derivatives, predominantly covered call options for investment purposes which may negatively affect the overall value of the Company.

Investors in this Company should understand that capital growth is not the main priority and values may fluctuate and the level of income may vary from time to time and is not guaranteed.

The Company may from time to time utilise gearing. A fuller definition of gearing is given in the glossary.

The information contained in this release was correct as at 28 February 2025. Information on the Company's up to date net asset values can be found on the London Stock Exchange website at:

<https://www.londonstockexchange.com/exchange/news/market-news/market-news-home.html>

Company objective

The Company's investment objective is to provide an attractive level of income together with capital appreciation over the long term, whilst incorporating the ESG commitments described in the Company's investment policy.

Fund information (as at 28/02/25)

Net asset value - capital only:	224.13p
Net asset value - cum income:	224.79p
Share price:	208.00p
Discount to cum income NAV:	7.5%
Net yield: ¹	3.8%
Total assets including current year revenue:	£153.9m
Net cash:	0.1%
Ordinary shares in issue: ²	68,451,984
Ongoing charges: ³	1.06%

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

¹ Based on four quarterly dividends of 2.00p per share declared on 14 March 2024, 29 May 2024, 1 August 2024 and 13 November 2024 for the year ended 31 October 2024, based on the share price as at close of business on 28 February 2025.

² Excluding 26,909,321 ordinary shares held in treasury.

³ The Company's ongoing charges calculated as a percentage of average daily net assets and using the management fee and all other operating expenses excluding finance costs, direct transaction costs, custody transaction charges, VAT recovered, taxation and certain non-recurring items for the year ended 31 October 2024.

Comments from the Portfolio Managers

Please note that the commentary below includes historic information on the Company's NAV performance data and index and share price performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results.

For the one-month period ended 28 February 2025, the Company's NAV decreased by 0.8% and the share price by 1.0% (all in sterling). The Company's reference index, the Russell 1000 Value Index, returned -0.9% for the period.¹

At the sector level, the largest contributor to relative performance stemmed from stock selection in health care, with investment decisions in health care providers and services boosting relative performance. Relative performance was also boosted by security selection in industrials, specifically selection decisions in building products. Other modest contributors during the period at the sector level included selection decisions in consumer discretionary and utilities.

The largest detractor from relative performance stemmed from stock selection in consumer staples, most notably investment decisions in food products. Selection decisions in financials also detracted from relative performance, with investment decisions in financial services dragging on relative performance. Other modest detractors at the sector level included an overweight allocation in information technology and selection decisions in materials.

Transactions

During the month, the Company's largest purchases were Charles Schwab and Icon. The Company exited its position in Discover Financial Services and Diageo ADR.

Positioning

As of the period end, the Company's largest overweight positions relative to the reference index were in the information technology, consumer discretionary and communication services sectors. The Company's largest underweight positions relative to the reference index were in the industrials, financials and real estate sectors.

Risk: Reference to the names of each company mentioned in this communication is merely for explaining the investment strategy, and should not be construed as investment advice or investment recommendation of those companies.

Any opinions or forecasts represent an assessment of the market environment at a specific time and is not intended to be a forecast of future events or a guarantee of future results. This information should not be relied upon by the reader as research, investment advice or a recommendation.

Annual performance to the last quarter end (as at 31 December 2024)

Sterling	31/12/23	31/12/22	31/12/21	31/12/20	31/12/19
	31/12/24	31/12/23	31/12/22	31/12/21	31/12/20
	%	%	%	%	%
Net asset value	8.2	4.1	2.9	24.0	-0.8
Share price	9.0	2.3	-0.8	27.8	-8.6
Reference index ¹	16.4	5.2	4.1	26.3	-0.4

Performance statistics source: BlackRock, Datastream.

¹ The Company's reference index is the Russell 1000 Value Index.

Cumulative performance (as at 28/02/25)

Sterling	1M%	3M%	6M%	1Y%	3Y%	5Y%
Net asset value	-0.8	-1.8	4.3	8.4	19.5	61.2
Share price	-1.0	-1.0	6.2	16.4	18.1	55.5
Russell 1000 Value Index ¹	-0.9	-1.2	9.0	16.3	36.7	82.9
Russell 1000 Value Index (Net 15% WHT Total Return) ²	-0.9	-1.3	8.8	15.9	35.3	79.8

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

¹ The Company's reference index is the Russell 1000 Value Index.

² The Company's performance reference index (the Russell 1000 Value Index) may be calculated on either a gross or a net return basis. Net return (NR) indices calculate the reinvestment of dividends net of withholding taxes using the tax rates applicable to non-resident institutional investors, and hence give a lower total return than indices where calculations are done on a gross basis. As the Company is subject to the same withholding tax rates for the countries in which it invests, the NR basis is felt to be the most accurate, appropriate, consistent and fair comparison of performance returns for the Company.

Index performance returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index.

The above Net Asset Value (NAV) performance statistics are based on a NAV including income with any dividends reinvested on the ex-dividend date, net of ongoing charges and any applicable performance fee. Share price performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date. The performance of the Company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

A fuller definition of ongoing charges, which includes the annual management fee, is given in the glossary. Details of the management fee are given in the key company details section. The Company does not have a performance fee.

Ticker	BRAI/LON

NMPI status

The Company currently conducts its affairs so that its securities can be recommended by Independent Financial Advisers to ordinary retail investors in accordance with the Financial Conduct Authority's (FCA) rules in relation to Non-Mainstream Pooled Investments (NMPI) and intends to continue to do so for the foreseeable future. The securities are excluded from the FCA's restrictions which apply to non-mainstream pooled investments because they are shares in an investment trust.

GLOSSARY OF TERMS

DELTA

Delta is one of four major risk measures used by option traders and investors. Delta measures the sensitivity of the option price to changes in the price of the underlying asset (i.e. stock). For example, if a stock option has a delta value of 0.80, this means that if the underlying stock increases in price by \$1 per share, the option on it will rise in value by \$0.80, all else being equal.

BlackRock American Income Trust plc portfolio invests in stocks and also utilises an option overwriting strategy (i.e. writing and selling covered call options) to enhance the portfolio's income. Therefore, the delta of the portfolio (stocks and options securities combined) measures the portfolio's price sensitivity to changes in the price of the portfolio's underlying equity securities, all else being equal.

DISCOUNT/PREMIUM

Investment trust shares frequently trade at a discount or premium to the NAV. This occurs when the share price is less than (a discount) or more than (a premium) to the NAV. The discount or premium is the difference between the share price (based on mid-market share prices) and the NAV, expressed as a percentage of the NAV.

Discounts and premiums are mainly the consequence of supply and demand for the shares on the stock market.

GEARING

Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favourable situation or a particularly attractive stock without having to sell existing investments.

Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

NET YIELD

The net yield is calculated using total dividends declared in the last 12 months (as at date of this factsheet) as a percentage of the month end share price.

NAV (Net Asset Value)

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any

potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

ONGOING CHARGES RATIO

Ongoing charges (%) =

$$\frac{\text{Annualised ongoing charges}}{\text{Average undiluted net asset value in the period}}$$

Ongoing charges are those expenses of a type which are likely to recur in the foreseeable future, whether charged to capital or revenue, and which relate to the operation of the investment company as a collective fund, excluding the costs of acquisition/disposal of investments, financing charges and gains/losses arising on investments. Ongoing charges are based on costs incurred in the year as being the best estimate of future costs and include the annual management fee.

OPTIONS

An option is a contract that offers the buyer the right, but not the obligation, to buy (call) or sell (put) a security or other financial asset at an agreed-upon price (the strike price) during a certain period of time or on a specific date (exercise date) for a fee (the premium). The sale of call or put options on stocks that are believed to be overpriced or underpriced, based on the assumption that the options will not be exercised, is referred to as an 'options overwriting' strategy. The seller of the option collects a premium but if the option subsequently expires without being exercised, there will be no downside for the seller. However, if the stock rises above the exercise price the holder of the option is likely to exercise the option and this strategy can reduce returns in a rising market.

The Company may write options to generate income and for efficient portfolio management. Risk is mitigated by ensuring that any call options are covered (meaning that call options are only written in respect of stocks already owned within the Company's portfolio such that, if the options are exercised, the Company does not need to purchase stock externally at fluctuating market prices to meet its obligations under the options contract). Any use of derivatives for efficient portfolio management and options for investment purposes will be made on the basis of the same principles of risk spreading and diversification that apply to the Company's direct investments.

This information should not be relied upon as research, investment advice, or a recommendation regarding any products, strategies, or any security in particular. This is for illustrative and informational purposes and is subject to change. It has not been approved by any regulatory authority or securities regulator.

Risk Warnings

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Levels and basis of taxation may change from time to time.

Trust specific risks

Exchange rate risk. The return of your investment may increase or decrease as a result of currency fluctuations.

Risk to capital through derivative use. The fund may use derivatives to aim to generate more income. This may reduce the potential for capital growth.

Capital Growth/Income variation. Investors in this Fund should understand that capital growth is not a priority and values may fluctuate and the level of income may vary from time to time and is not guaranteed.

Derivative Risk. The Fund uses derivatives as part of its investment strategy. Compared to a fund which only invests in traditional instruments such as stocks and bonds, derivatives are potentially subject to a higher level of risk.

Gearing Risk. Investment strategies, such as borrowing, used by the Trust can result in even larger losses suffered when the value of the underlying investments fall.

Counterparty Risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Equity Risk. The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.

Important Information
