

Company objective

The Company's investment objective is to achieve long term capital growth by investing in companies domiciled or listed in, or exercising the predominant part of their economic activity in, less developed countries. These countries (the "Frontiers Universe") are any country which is neither part of the MSCI World Index of developed markets nor one of the eight largest countries by market capitalisation in the MSCI Emerging Markets Index as at 1 April 2018 being: Brazil, China, India, Korea, Mexico, Russia, South Africa and Taiwan.

Key risk factors

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Overseas investments will be affected by currency exchange rate fluctuations.

The Company invests in a number of developing emerging markets ("Frontier Markets"). Frontier Markets tend to be more volatile than more established markets and therefore present a higher degree of risk as they are less well regulated and may be affected by political and social instability and other factors. These markets do not generally operate as efficiently as those in more developed countries. Corruption remains a significant issue across frontier markets and could have a material adverse effect on the value of investments. In addition, potential irregularities in market operations relating to settlement of securities transactions, custody of assets and insolvency proceedings presents a material risk of loss of assets belonging to the Company. Investments may be subject to severe liquidity constraints which mean that securities may trade infrequently and/or volume may be concentrated in a small number of companies and across a limited number of investors and financial intermediaries. As a result, changes in the value of investments may be more unpredictable. In certain cases, it may not be possible to sell the security at the last market price quoted or at a value considered to be fairest.

The information contained in this release was correct as at 28 February 2025. Information on the Company's up to date net asset values can be found on the London Stock Exchange Website at: <https://www.londonstockexchange.com/exchange/news/market-news/market-news-home.html>

Key risk factors Continued

BlackRock intends to invest in a representative number of the frontier markets although may not be able to achieve exposure in certain markets due to Office of Foreign Asset Control (OFAC) and United Nations (UN) sanctions and other counterparty considerations. Exposure is achieved where permitted by all practicable means including (but not limited to) equities listed on exchanges in frontier markets and derivatives thereof, American Depositary Receipts (ADRs), and Global Depositary Receipts (GDRs) and of companies with operations in frontier markets but whose equities are listed on developed market exchanges.

The Company may from time to time utilize gearing. A fuller definition of gearing is given in the Glossary.

Non-Mainstream Pooled Investments (NMPI) Status

The Company currently conducts its affairs so that its securities can be recommended by Independent Financial Advisers to ordinary retail investors in accordance with the FCA's (Financial Conduct Authority) rules in relation to NMPI and intends to continue to do so for the foreseeable future. The securities are excluded from the FCA's restrictions which apply to non-mainstream pooled investments because they are shares.

Performance

The latest performance data can be found on the BlackRock Investment Management (UK) Limited website at blackrock.com/uk/brfi

A fuller definition of ongoing charges, which includes the annual management fee, is given in the Glossary. Details of the management and performance fees are given in the fund information table overleaf. The performance of the Company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Index performance returns do not reflect any management fees, transaction costs or expenses. Indices are unmanaged and one cannot invest directly in an index.

* 17 December 2010.

**The Company's benchmark changed from MSCI Frontier Markets Index to MSCI Emerging ex Selected Countries + Frontier Markets + Saudi Arabia Index (net total return, USD) effective 1/4/2018.

The above Net Asset Value (NAV) performance statistics are based on an NAV with income included with any income reinvested on the ex-dividend date, net of ongoing charges and any applicable performance fee. Share price performance figures are calculated on a mid market basis in sterling terms with income reinvested on the ex-dividend date.

Comments from the Portfolio Managers

Please note that the commentary below includes historic information in respect of the performance of portfolio investments, index performance data and the Company's NAV and share performance.

The figures shown relate to past performance. Past performance is not a reliable indicator of current or future results.

The Company's NAV rose by 0.7% in February, outperforming its benchmark, the MSCI Frontier + Emerging Markets ex Selected Countries Index ("Benchmark Index") which returned -1.2%.¹

For reference, the MSCI Emerging Markets Index returned +0.5% while the MSCI Frontier Markets Index returned +1.9% over the same period. All performance figures are on a US Dollar basis with net income reinvested.

Emerging Markets (+0.5%) significantly outperformed Developed Markets, which dropped by 0.7% in February 2025. EMEA (+0.7%) outperformed as the region experienced a significant uplift from a potential Russia-Ukraine ceasefire. Notably, Poland ended the month up by 7.7%. While EM Asia (+1.1%) outperformed, performance within the region was mixed. Thailand (-10%) was amongst the bottom performers, as signs of economic slowdown, reflected in earnings disappointment. LatAm underperformed, declining by 1.8% over the month.

Stock selection across markets had a positive impact on portfolio returns in February 2025. The largest contributor to returns was our off-benchmark position in Lucky Cement (+20.3%), a Pakistani conglomerate with businesses in local cement production, chemicals, passenger vehicle assembly, power generation as well as international cement operations in the Middle-East and Africa. The stock rose on the expectations of improved activity as interest rates have come quite significantly in Pakistan. A collection of names exposed to a potential resolution in the war between Ukraine and Russia also did well including Wizz Air, the Hungarian low-cost carrier up by 31.6% and polish clothing retailer LPP up by 12.6%. Our position in Philippines based gaming conglomerate DigiPlus Interactive Corporation (+30.0%) also contributed to returns driven by strong activity indicators and plans to expand into other gaming verticals and new markets.

On the flipside, IT services company EPAM (-18.7%) was the largest detractor over the month. In addition to a softer outlook for the broader Information Technology sector, the stock also sold off following a soft set of results which missed expectations. However, we maintain conviction in the name and note stronger revenue guidance for next year. Vietnamese IT services company FPT (-10.5%) also detracted from performance. Software Development company Endava (-26%) was another detractor. While the company announced a decent set of earnings results, they revised down their FY25 revenue forecast. Ciputra Development (-21.1%), the Indonesian property developer, also detracted alongside the Indonesian market as newsflow on fiscal and monetary policy remains uncertain.

We made a few changes to the portfolio in February. In Indonesia, we rotated our bank exposure from Bank Central Asia to Bank Mandiri due to the latter's attractive valuation. We also added to property developer Ciputra. The stock looked oversold despite as company remains well positioned within the broader real sector in Indonesia. Elsewhere, we took advantage of recent weakness to top up our holding in Thai Real Estate name Amata. We trimmed our holding in Raiffeisen Bank and Philippines based gaming conglomerate DigiPlus to lock in profits. We also added to IT services company Endava, taking advantage of recent weakness. The stock is trading at attractive valuations and should be further supported by a \$100m buyback expected through the year.

We continue to see improving activity levels in some frontier and smaller emerging markets. With inflation falling across many countries within our universe, rate cuts should resume once US bond yields settle down. This is a good set up for domestically oriented economies to see a cyclical pick up. We remain positive on the outlook for small emerging and frontier markets, and we find significant value in currencies and equity markets across our investment opportunity set. Our investment universe, in absolute and relative terms, remains under-researched and we believe this should enable compelling alpha opportunities.

Unless otherwise stated all data is sourced from BlackRock as at 28 February 2025. All data points in US Dollar terms unless otherwise specified.

Glossary of terms

Alternative Investment Market (AIM)

AIM is the London Stock Exchange's international market for smaller growing companies. The AIM market has no restrictions on market capitalisation, and financial reporting is more flexible than for companies listed on the main market of the London Stock Exchange.

CFD (Contracts for Difference)

Under a CFD contract the seller undertakes to pay to the buyer the difference between the current value of an asset and its value at a specified end date; this may be a positive or negative amount dependant on how the price has moved. A CFD contract may be used to profit from the price of the underlying asset falling as well as rising; if the buyer enters into a contract where the transaction will generate a profit if the price of the underlying holding falls, this is called a short position. A CFD contract also enables the Company to take advantage of price movements by paying only a small margin and without the cost outlay of purchasing the underlying stock. CFD contracts are not without risks. They may generate losses as well as profits if the price of the underlying asset moves in an unfavourable direction. CFDs also involve counterparty risk – the risk the CFD provider or another counterparty to a trade fails to fulfil their obligations – and liquidity risk, which means market conditions/the mechanics of trading could alter in such a way that trades cannot be made.

Discount/premium

Investment trust shares frequently trade at a discount or premium to NAV. This occurs when the share price is less than (a discount) or more than (a premium) to the NAV. The discount or premium is the difference between the share price (based on mid-market share prices) and the NAV, expressed as a percentage of the NAV.

Discounts and premiums are mainly the consequence of supply and demand for the shares on the stock market.

Gearing

Investment companies can borrow to purchase additional investments. This is called 'gearing'. It allows investment companies to take advantage of a long-term view on a sector or to take advantage of a favourable situation or a particularly attractive stock without having to sell existing investments. Gearing works by magnifying the company's performance. If a company 'gears up' and then markets rise and the returns on the investments outstrip the costs of borrowing, the overall returns to investors will be even greater. But if markets fall and the performance of the assets in the portfolio is poor, then losses suffered by the investor will also be magnified.

Net yield

The net yield is calculated using total dividends declared in the last 12 months (as at date of this factsheet) as a percentage of month end share price.

NAV (Net Asset Value)

A company's undiluted NAV is its available shareholders' funds divided by the number of shares in issue (excluding treasury shares), before making any adjustment for any potentially dilutive securities which the Company may have in issue, such as subscription shares, convertible bonds or treasury shares. A diluted NAV is calculated on the assumption that holders of any convertibles have converted, subscription shares have been exercised and treasury shares are re-issued at the mid-market price, to the extent that the NAV per share is higher than the price of each of these shares or securities and that they are 'in the money'. The aim is to ensure that shareholders have a full understanding of the potential impact on the Company's NAV if these instruments had been exercised on a particular date.

Ongoing charges ratio

Ongoing charges (%) =

$$\frac{\text{Annualised ongoing charges}}{\text{Average undiluted net asset value in the period}}$$

Ongoing charges are those expenses of a type which are likely to recur in the foreseeable future, whether charged to capital or revenue, and which relate to the operation of the investment company as a collective fund, excluding the costs of acquisition/disposal of investments, financing charges and gains/losses arising on investments. Ongoing charges are based on costs incurred in the year as being the best estimate of future costs and include the annual management fee.

Treasury shares

Treasury shares are shares that a company keeps in its own treasury which are not currently issued to the public. These shares do not pay dividends, have no voting rights and are not included in a Company's total issued share capital amount for the purpose of calculating percentage ownership. Treasury stock may have come from a repurchase or buyback from shareholders, or it may have never been issued to the public in the first place. Treasury shares may be reissued from treasury to the public to meet demand for a company's shares in certain circumstances.

Risk Warnings

Capital at risk. The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

Past performance is not a reliable indicator of current or future results and should not be the sole factor of consideration when selecting a product or strategy.

Changes in the rates of exchange between currencies may cause the value of investments to diminish or increase. Fluctuation may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Levels and basis of taxation may change from time to time.

Trust specific risks:

Gearing risk. Investment strategies, such as borrowing, used by the Trust can result in even larger losses suffered when the value of the underlying investments fall.

Emerging Europe. Emerging market investments are usually associated with higher investment risk than developed market investments. Therefore, the value of these investments may be unpredictable and subject to greater variation.

Exchange rate risk. The return of your investment may increase or decrease as a result of currency fluctuations.

Frontiers. Frontier markets are generally more sensitive to economic and political conditions than developed and emerging markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets and failed/delayed delivery of securities or payments to the Fund. There may be larger fluctuations to the value of your investment and increased risk of losing your capital.

Derivative Risk general. The Fund uses derivatives as part of its investment strategy. Compared to a fund which only invests in traditional instruments such as stocks and bonds, derivatives are potentially subject to a higher level of risk.

Counterparty Risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Non-investment grade risk. Non-investment grade fixed income securities are more sensitive to changes in interest rates and present greater 'Credit Risk' than higher rated fixed income securities.

Important Information

Issued by BlackRock Investment Management (UK) Limited, authorised and regulated by the Financial Conduct Authority. Registered office: 12 Throgmorton Avenue, London, EC2N 2DL.
