FUND OVERVIEW

The fund aims to achieve a total return on your investment, through a combination of capital growth and income on the Fund's assets, which reflects the return of the Solactive €STR +8.5 T+2 Settlement Daily Total Return Index, the Fund's benchmark index (Index).

KEY BENEFITS

1. The fund provides indirect exposure to the index by entering into unfunded total return swaps.
2. The Index provides daily values representing a value 0.085% higher than the Euro Short-Term Rate (€STR) (the rate published by the European Central Bank which reflects overnight borrowing costs of Euro area banks).
3. The fund is suitable for medium to long term investment, though the Fund may also be suitable for shorter term exposure to the Index.

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Share Class to financial loss.
- The Fund's ability to track the benchmark's performance is reliant on the counterparties to continuously deliver the performance of the benchmark in line with the swap agreements (i.e. counterparty risk) and would also be affected by any spread between the pricing of the swaps and the pricing of the benchmark. If any swap counterparty fails to provide sufficient assets as security for amounts owed to the Fund, there might be an increased counterparty risk exposure at a given time.

GLOSSARY

SFDR Classification: Article 8: Products that promote environmental or social characteristics and promote good governance practices.

Article 9: Products that have sustainable investments as an objective and follow good governance practices. **Other:** Products that do not meet the criteria to be classified as Article 8 or 9.

Yield to Maturity: Yield to Maturity (YTM) is the discount rate that equates the present value of bond's cash flows with its market price (including accrued interest). The fund YTM is the weighted average of fund's individual bond holding YTM's based upon Net Asset Value ('NAV'). The measure does not include fees and expenses. For callable bonds, YTM is the Yield-to-Worst.

Effective Duration: Effective duration is a measure of a fund's interest-rate sensitivity. Put simply, the longer a fund's duration, the more sensitive the fund is to shifts in interest rates. So a fund with a duration of 10 years is twice as volatile as a fund with a five-year duration.
