

IGEB

Seek outperformance at a low cost in corporates

Putting factors to work in corporates

Factors have changed the way we invest. But did you know that many of the well-known factors that are found in equities also exist in fixed income?

Now, investors are exploring how low-cost fixed income factor ETFs can help build better bond portfolios.

The **iShares Investment Grade Bond Factor ETF (IGEB)** seeks to track an index that blends two diversifying factors—Quality and Value—to target superior risk-adjusted and total returns versus a broad corporate bond market.

iShares Investment Grade Bond Factor ETF

Expense ratio: 0.18%

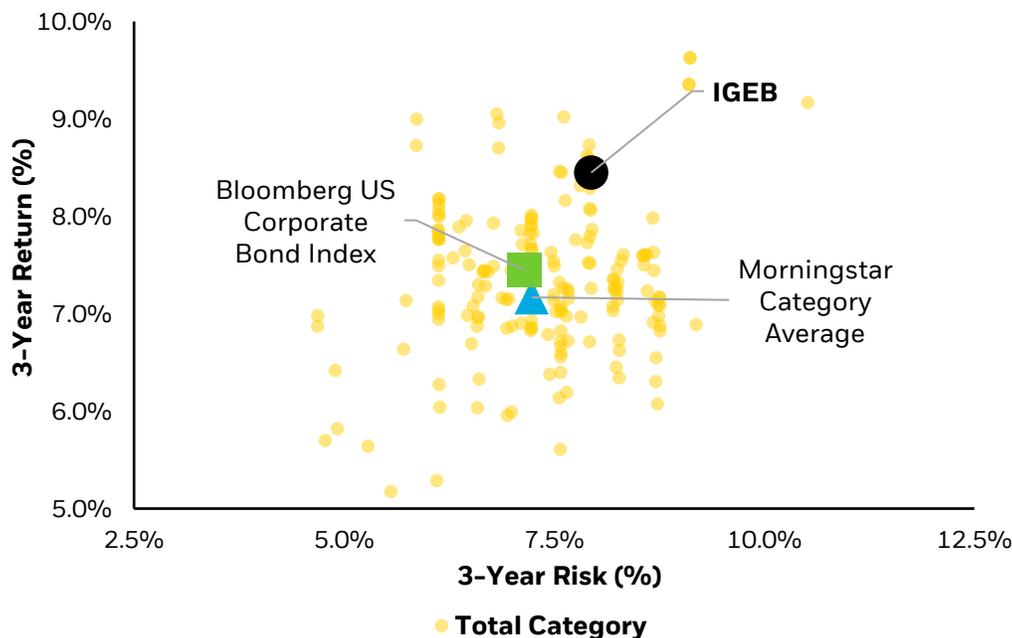

3-Year Total Return Rank:
17/189 funds (9th percentile) in the Morningstar Corporate Bond category²

30-Day SEC yield: 1.99%

Effective Duration: 7.85 yrs

All above data as of 9/30/2021.

IGEB vs. Morningstar Corporate Bond Fund Category¹

91%
COMPETITIVE PERFORMANCE

IGEB has outperformed 91% of its peers on a 3-year basis.²

88%
LOWER COST

IGEB's expense ratio is lower than 88% of its peers, and 0.50% less than the average fund in the category.³

Performance data represents past performance and does not guarantee future results. Investment return and principal value will fluctuate with market conditions and may be lower or higher when you sell your shares. Current performance may differ from the performance shown. For most recent month-end performance see www.iShares.com. For standardized performance, see the next page.

¹ Source: Data for Bloomberg US Corporate Bond Index and Morningstar Corporate Bond Fund Category Average as reported by Morningstar as of 9/30/2021. Data for IGEB is provided by BlackRock as of 9/30/2021. Universe includes all index funds, ETFs, and mutual funds with 3 years of performance using total return. Risk, represented by standard deviation, measures how dispersed returns are around the average. A higher standard deviation indicates that returns are spread out over a larger range of values and thus, more volatile. ² Morningstar as of 9/30/2021. Universe includes all index funds, ETFs, and mutual funds in the Corporate Bond category. IGEB outperformed 62% of funds (38th percentile) over the 1-year period, ranked 78/205 in the Corporate Bond category. Total return represents changes to the NAV and accounts for distributions from the funds (excluding any applicable sales charges). Past performance does not guarantee future results. Other time periods may have different results. ³ Morningstar as of 9/30/2021. Average expense ratio in the Corporate Bond category is 0.67%. Universe includes all index funds, ETFs, and mutual funds, based on average prospectus net expense ratios.

IGEB's index overview

Seeks to avoid riskier securities while targeting higher quality and undervalued bonds

Screen on Quality

Screens out bonds based on Quality metrics in an effort to **avoid risky securities and minimize potential drawdowns**

Tilt toward Value

Tilts toward bonds based on Value with attractive default-adjusted spreads to seek **enhanced income potential and total returns**

Align to Market

Aligns portfolio with broad market in an effort to **limit unintended risks and minimize turnover**

Notable exclusion Kraft Heinz Co (KHC)

What? KHC was screened out of the index a year before it was downgraded to high yield because it was in the bottom Quality percentile of the BBB market based on BlackRock's probability of default estimate.

Why? In 2019, KHC posted very disappointing operating results. Since then, further deteriorations in margins and a disclosure of an SEC investigation on its accounting practices have weighed heavily on its bonds.

For illustrative purposes only. Based on the methodology of the BlackRock Investment Grade Enhanced Bond Index.

Notable exclusion is selected to illustrate the investment process as of the most recent rebalance (09/30/20). Securities shown for illustrative purposes only and should not be construed as recommendation to buy, hold or sell. There is no guarantee that any securities remain in or out of the fund. For current fund holdings, see www.iShares.com.

IGEB Standardized Performance as of 9/30/2021	1 Year	5 Year	10 Year	Since Inception (07/11/2017)
Fund NAV Total Return	2.60%	--	--	5.87%
Fund Market Price Total Return	2.25%	--	--	5.80%
BlackRock Investment Grade Enhanced Bond Index	2.75%	--	--	6.00%

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by visiting www.iShares.com or www.blackrock.com.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Any applicable brokerage commissions will reduce returns. Beginning August 10, 2020, market price returns for BlackRock and iShares ETFs are calculated using the closing price and account for distributions from the fund. Prior to August 10, 2020, market price returns for BlackRock and iShares ETFs were calculated using the midpoint price and accounted for distributions from the fund. The midpoint is the average of the bid/ask prices at 4:00 p.m. ET (when NAV is normally determined for most ETFs). The returns shown do not represent the returns you would receive if you trades shares at other times.

Carefully consider the Funds' investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the Funds' prospectuses or, if available, the summary prospectuses which may be obtained by visiting www.iShares.com or www.blackrock.com. Read the prospectus carefully before investing. Investing involves risk, including possible loss of principal.

Index performance is for illustrative purposes only. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index.

Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments.

Diversification may not protect against market risk or loss of principal. Buying and selling shares of ETFs may result in brokerage commissions.

There can be no assurance that performance will be enhanced or risk will be reduced for funds that seek to provide exposure to certain quantitative investment characteristics ("factors"). Exposure to such investment factors may detract from performance in some market environments, perhaps for extended periods. In such circumstances, a fund may seek to maintain exposure to the targeted investment factors and not adjust to target different factors, which could result in losses.
