Global
Allocation Fund

INST: MALOX • A: MDLOX • C: MCLOX • K: MKLOX
⭐⭐⭐⭐ Morningstar Overall Rating™ (Inst) Gold

**Performance:** The fund performed in line with its benchmark as equities rallied as the U.S. government reached a debt deal and the U.S. Federal Reserve paused on its historic interest rate hike campaign.

▲ **Contributors:** Selection in materials and financials.

- Underweight US duration. Exposure to credit & securitized.

▼ **Detractors:** Selection in technology, discretionary, & communication services. Exposure to gold-related securities.

**Positioning:** Slight overweight to equities, with an emphasis on quality and stable growth. Underweight to duration, overweight credit, and securitized assets. Cash, derivatives, & gold as additional risk mitigants.

▲ **Increased:** Equities, notably via industrials, consumer discretionary, and financials. US dollar.

▼ **Decreased:** Communication services. US duration and securitized assets.

---

A history of competitive performance and limited downside

By maintaining a long-term objective of capital appreciation, with a mindful eye on downside volatility, the Fund has aimed to provide a smoother investment experience by generating competitive returns with fewer and shallower drawdowns compared to equities. **A risk aware mandate can make a big difference to the overall client experience.**

Source: Bloomberg, Morningstar. Data reflects a time series of rolling 3-year cumulative returns based on calendar month-ends. Date range represents the life of the fund (Institutional share class inception 2/28/89 through the recent quarter-end) and is applied across all categories. The best 3-year return represents the highest 3-year return within the time series for each category. The average 3-year return represents the average 3-year return over the time series for each category. The worst 3-year return represents the lowest 3-year return with the time series for each category. The number of negative periods represents the total number of periods where the 3-year return was <0.00% for each category. Asset classes represented by FTSE World Gov't Bond Index, S&P 500 Index, FTSE World Index. Morningstar category by the Global Allocation Funds average. All data as of 06/30/23. **Fund data based on Institutional shares, which may not be available to all investors; other share classes will vary.** Index performance is shown for illustrative purposes only. It is not possible to invest directly in an unmanaged index.

Performance data quoted represents past performance and is no guarantee of future results. Investment returns and principal values may fluctuate such that an investor’s shares, when redeemed, may be worth more or less than their original cost. All returns assume reinvestment of dividends and capital gains. Current performance may be lower or higher than that shown. For current month-end returns visit www.blackrock.com.

Morningstar has awarded the fund’s Institutional share class a Gold medal. (Last rating 05/01/23.) 1

The overall Morningstar rating of 4 stars pertains to the fund’s Institutional shares, rated against 376 funds in the Global Allocation category as of 06/30/23. Ratings are based on a risk-adjusted total return and a weighted average of performance figures associated with 3-, 5- and 10-year Morningstar rating metrics. Ratings are determined monthly and subject to change. 2

Flexibility in practice: adapting as markets change

Post-tech bubble: Increased U.S. equity exposure due to attractive valuations and a recovering global economy.

Credit crisis: Added to convertible bonds during the global credit crisis as limited liquidity across the asset class due to distressed selling led to attractive prices.

Rick Rieder assumed leadership (April 2019): Decreased exposure to cash following policy pivot among global central banks, and added to U.S. equities, Treasuries and investment grade credit.

Prior to 2015, the fund’s exposure was based on market value and adjusted for the economic value of futures and swaps. From 2015, the fund’s exposure is based on the economic value of securities and is adjusted for futures, options and swaps, except with respect to fixed income securities and convertible bonds. Commodity-related is comprised of precious metals ETFs.

Prior to 2006, commodity-related exposure was included in equities. Prior to October 2019, exposure to securitized debt was included within fixed income. Historical ranges represent actual exposures, not minimum or maximum prospectus limits. Subject to change. Over/under indications are relative to the fund’s reference benchmark, which is 36% S&P 500 Index, 24% FTSE World (ex-U.S.) Index, 24% ICE BofAML Current 5-Year U.S. Treasury Index and 16% FTSE Non-U.S. Dollar World Government Bond Index.

Designed to seek a better outcome

The Fund’s mission is to provide a core holding, suitable for a broad range of clients and deliver a competitive rate of return with less volatility than a global stock portfolio over a full market cycle. Since its inception in 1989, the fund has outperformed global stocks with one-third less volatility.*

Source: BlackRock, Bloomberg. Based on a hypothetical investment of $10,000 in the fund and FTSE World Index made first month post inception (2/3/89). * Volatility is represented by annualized standard deviation. Standard deviation for the fund: 9.97% and global stocks: 15.42%.

Our view on the market and portfolio positioning

As fears of another banking crisis fade, both stock and bond yields have moved higher. Since the March trough, US stocks and the yields on US Treasuries have risen. As market conditions have improved, inter-asset correlations have also shifted. Bonds proved an effective hedge in the aftermath of the initial bank failures in early March but less so recently. Going forward, we would expect stock/bond correlations to continue to be less stable than the post-Globa Financial Crisis norm.

How stocks and bonds co-move is influenced by several factors, including inflation and financial conditions. And while inflation is coming down, it remains high and volatile. U.S. core inflation is slowly decelerating but remains elevated, at just shy of 5%. Higher inflation volatility, which undermines investor confidence in bonds, has been associated with higher stock/bond correlations. The second problem for those looking to use bonds as a hedge is that the Federal Reserve is once again shrinking its balance sheet. Historically, changes in the Fed’s balance sheet, along with broader financial conditions, have co-moved with stock/bond correlations. If the worst of the banking crisis is behind us and the Fed’s balance sheet continues to shrink, bonds may prove a less effective hedge going forward.

Outside of extreme events in the banking system, the outlook for bonds as a hedge will be determined by one of two economic scenarios. If inflation is decelerating and the Fed is on hold, investors should have more confidence in bonds as a hedge. However, if recent economic resilience continues, core inflation remains elevated, and the Fed is forced to continue hiking, bonds may provide some diversification but prove a less reliable hedge. Our base case is a slowing but still resilient economy, with inflation gradually coming down albeit not to the equilibrium experience in prior cycles. This would suggest staying tactical with your bond allocation and diversifying your hedges.

In this environment, we have increased the fund’s equity exposure, bringing it to a modest overweight, with an emphasis on stable growth and quality companies that can generate earnings consistency and are aligned with long-term structural trends. This would include industries such as software / AI, healthcare, luxury retailers, travel and select industrials. We have also added convexity to the portfolio via derivatives, notably call options on equity index futures and select equities as well as put options. We are underweight duration (1.9 years vs. benchmark duration of 2.5 years) given the view that the US economy has proven very resilient to higher rates thus far, which suggests we may be in a regime of higher equilibrium rates for the time-being and back-end rates could drift higher. As a result, we rotated some of our U.S. exposure towards short-end duration, at the expense of longer-dated rates, which have remained very inverted. We maintain exposure to a diversified basket of corporate credit, securitized assets, and emerging market sovereigns. In-line with the fund’s risk aware mandate, we hold exposure to an array of portfolio hedges, including high quality carry via income yielding assets, derivatives, gold, and cash.

Data represents past performance and is no guarantee of future results. Investment returns and principal values may fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. All returns assume reinvestment of dividends and capital gains. Current performance may be lower or higher than that shown. Share classes have different sales charges, fees and other features. Returns with sales charge reflect the deduction of current maximum initial sales charge of 5.25% for Investor A shares. Institutional shares have no front- or back-end load, limited availability and may be purchased at various minimums. See prospectus for details. Investment returns reflect total fund operating expenses, net of all fees, waivers and/ or expense reimbursements. Expenses, as stated in the fund’s most recent prospectus, for Institutional/Investor A shares: Total: 0.89%/1.14%; Net: Including Investment-Related Expenses (dividend expense, interest expense, acquired fund fees and expenses and certain other fund expenses): 0.84%/1.09%. Institutional and Investor A have contractual waivers with an end date of 6/30/24, terminable upon 90 days’ notice. Index performance is shown for illustrative purposes only. It is not possible to invest directly in an unmanaged index. Net Expenses, Excluding Investment Related Expenses for Institutional/Investor A shares: 0.81%/1.06%.

Important risks: The fund is actively managed and its characteristics will vary. Stock and bond values fluctuate in price so the value of your investment can go down depending on market conditions. International investing involves special risks including, but not limited to, currency fluctuations, illiquidity and volatility. These risks may be heightened for investments in emerging markets. Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments. Non-investment-grade debt securities (high-yield/junk bonds) may be subject to greater market fluctuations, risk of default or loss of income and principal than higher-rated securities. Asset allocation strategies do not assure profit and do not protect against loss. Short selling entails special risks. If the fund makes short sales in securities that increase in value, the fund will lose value. Any loss on short positions may or may not be offset by investing short-sale proceeds in other investments. The fund may use derivatives to hedge its investments or to seek to enhance returns. Derivatives entail risks relating to liquidity, leverage and credit that may reduce returns and increase volatility.

The opinions expressed are those of the fund’s portfolio management team as of June 30, 2023, and may change as subsequent conditions vary. Information and opinions are derived from proprietary and nonproprietary sources deemed by BlackRock to be reliable, are not necessarily all-inclusive and are not guaranteed as to accuracy.

1 The Morningstar Analyst Rating⁷ is the summary expression of Morningstar’s forward-looking analysis of investment strategies using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Analysts assign three pillar ratings (People, Parent and Process) based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. For more detailed information about these ratings and methodology, please go to global.morningstar.com/managersdisclosures. The ratings are not statements of fact, nor credit or risk ratings. The rating (i) should not be used as the sole basis in evaluating an investment product, (ii) involves unknown risks which may cause expectations not to occur or to differ from what was expected, (iii) are not guaranteed to be based on complete or accurate assumptions, (iv) involve the risk that the return target will not be met due to unforeseen changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange and tax rates, and/or changes in political and social conditions, and (v) should not be considered an offer or solicitation to buy or sell the investment product. 2 MSCI World Index is a market capitalization-weighted index that represents the performance of developed market equities; Bloomberg U.S. Aggregate Bond Index represents the performance of the total U.S. investment grade bond market. 3 The Morningstar RatingTM for funds, or “star rating,” is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on Morningstar’s Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 1% of products in each product category receive 5 stars; the next 22.5% receive 4 stars; the next 35% receive 3 stars; the next 22.5% receive 2 stars; and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. With respect to U.S.-domestic funds in the Global Allocation category, the fund received a Morningstar Rating of 3 stars for the 3-year period; rated against 376 funds; 4 stars for the 5-year period, rated against 347 funds; and 4 stars for the 10-year period, rated against 255 funds. Ratings are for Institutional share class. Other classes may have different performance characteristics. 3 Fund Inception; 2/3/89. 4 The performance information for periods prior to the inception date of the Investor A share class (10/21/94) is based on the fund’s Institutional share class adjusted to reflect the fees and expenses applicable to the Investor A share class. See the fund’s prospectus for more details. 5 The FTSE World Index is comprised of world equities, including the U.S. The Reference Benchmark is 5% S&P 500 Index, 24% FTSE World (ex-US) Index, 24% ICI S&P Merrill. Current 5-Year U.S. Treasury Index and 10% FTSE Non-U.S. Dollar World Government Bond Index. S&P 500 Index comprises large-capitalization U.S. equities. FTSE World (ex-US) Index comprises world equities, ex-U.S. ICI BofAML 5-Year U.S. Treasury Bond Index tracks the 5-year U.S. Treasury bond. FTSE Non-U.S. Dollar World Government Bond Index tracks government bond indices, ex-US.

You should consider the investment objectives, risks, charges and expenses of the fund carefully before investing. The prospectus and, if available, the summary prospectus contain this and other information about the fund and are available, along with information on other BlackRock prospects, by calling 800-882-0052 or from your financial professional. The prospectus should be read carefully before investing.
