

# U.S. TREASURY BOND EXPOSURE WITH THE EFFICIENCY OF AN ETF

## Key takeaways

### Access

Get access to U.S. government bonds with the efficiency of an ETF

### Customize

Use iShares Treasury bond ETFs to get exposure to segments of the Treasury yield curve or the entire curve with GOVT

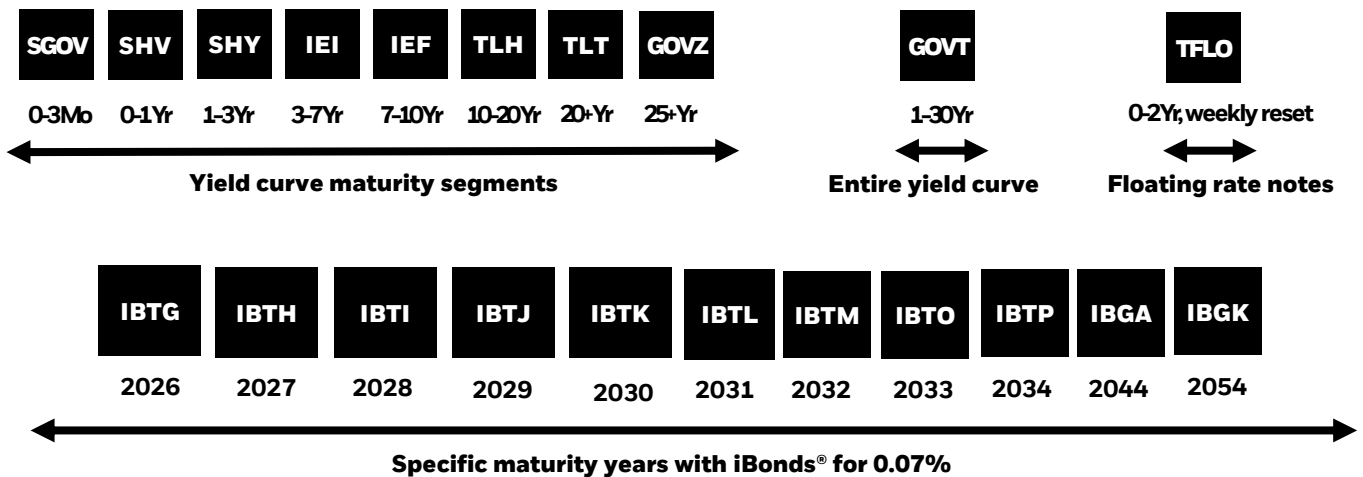

### Tax Efficient

iShares Treasury bond ETFs historically have not paid out capital gains

## Seek to add protection to your investment portfolio

In times of market stress, improving the credit quality of your fixed income sleeve can help build portfolio resilience.

U.S. government bonds are high-quality, AA-rated securities that can diversify your investment portfolio. Historically, when stock markets sell off, these bonds have experienced a flight-to-quality and increased in value. These bonds can serve as a portfolio hedge against risk-off periods. iShares Treasury bond ETFs help you customize your portfolio by offering funds with a variety of U.S. Treasury bond maturity buckets.

# Customize your exposure to interest rate risk

With 22 options to choose from, you have the ability to target the duration you are looking for with iShares U.S. Treasury bond ETFs.

## Duration of iShares U.S. Treasury bond ETFs (years)

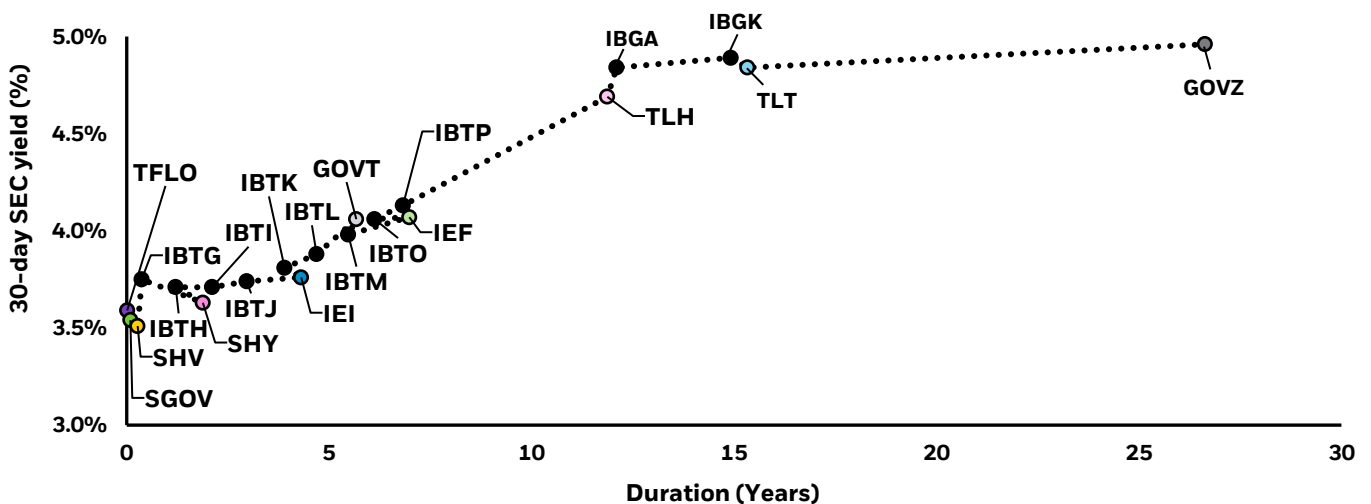

Source: BlackRock, as of 3/31/2026.

## Seek to target different segments of the yield curve

iShares U.S. Treasury bond ETFs offer exposure to Treasury bonds that mature within specific maturity years or ranges, allowing you to target points on the yield curve.

### Yield curve of iShares U.S. Treasury bond ETFs

- iShares Treasury Floating Rate Bond ETF (TFLO)

Performance data represents past performance and does not guarantee future results. Investment return and principal value will fluctuate with market conditions and may be lower or higher when you sell your shares. Current performance may differ from the performance shown. For most recent month-end performance see [www.iShares.com](http://www.iShares.com). Performance shown reflects fee waivers and/or expense reimbursements by the investment advisor to the fund for some or all of the periods shown. Performance would have been lower without such waivers.

1. Net expense ratios shown for GOVZ reflect contractual fee waivers in place through 02/29/2029 respectively.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Any applicable brokerage commissions will reduce returns. Beginning August 10, 2020, market price returns for BlackRock and iShares ETFs are calculated using the closing price and account for distributions from the fund. Prior to August 10, 2020, market price returns for BlackRock and iShares ETFs were calculated using the midpoint price and accounted for distributions from the fund. The midpoint is the average of the bid/ask prices at 4:00 PM ET (when NAV is normally determined for most ETFs). The returns shown do not represent the returns you would receive if you traded shares at other times. Since shares of a fund may not trade in the secondary market until after the fund's inception, for the period from inception to the first day of secondary market trading in shares of the fund, the NAV of the fund is used as a proxy for the Market Price to calculate market returns.

**Carefully consider the Funds' investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the Funds' prospectuses and, if available, summary prospectuses, which may be obtained by visiting [www.iShares.com](http://www.iShares.com) or [www.blackrock.com](http://www.blackrock.com). Read the prospectus carefully before investing.**

**Investing involves risk, including possible loss of principal.**

Fixed income risks include interest-rate and credit risk. Typically, when interest rates rise, there is a corresponding decline in bond values. Credit risk refers to the possibility that the bond issuer will not be able to make principal and interest payments. Diversification may not protect against market risk or loss of principal. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency and its return and yield will fluctuate with market conditions. Transactions in shares of ETFs will result in brokerage commissions and will generate tax consequences. All regulated investment companies are obliged to distribute portfolio gains to shareholders. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency and its return and yield will fluctuate with market conditions. The iShares® iBonds® ETFs will terminate in September or December of the year in the fund's name. An investment in the Fund(s) is not guaranteed, and an investor may experience losses, including near or at the termination date. In the final months of the Fund's operation, as the bonds it holds mature, its portfolio will transition to cash and cash-like instruments. Following the Fund's termination date, the Fund will distribute substantially all of its net assets, after deduction of any liabilities, to then-current investors without further notice and will no longer be listed or traded. The Funds do not seek to return any predetermined amount. During the months prior to the Fund's planned termination date, its yield will generally tend to move toward prevailing money market rates (or, in the case of the Muni iBonds ETFs, tax-exempt money market rates), and may be lower than the yields of the bonds previously held by the Fund and lower than prevailing yields for bonds in the market. The rate of Fund distribution payments may adversely affect the tax characterization of an investor's returns from an investment in the Fund relative to a direct investment in bonds. If the amount an investor receives as liquidation proceeds upon the Fund's termination is higher or lower than the investor's cost basis, the investor may experience a gain or loss for tax purposes.
